

Implant Centre Martinko Offers All-On-4 And All-On-6 Dental Implants

June 17, 2019

June 17, 2019 - PRESSADVANTAGE -

Italy based Implant Centre Martinko, an advanced dental implant center with offices in Zagreb, Croatia, and Trieste is pleased to announce that they provide All-On-4 and All-On-6 dental implants and a wide range of other modern dental treatments and services.

As noted on the centre's website, All-On-4 is a dental prosthetic implantology procedure that replaces the functional and aesthetic role of the patient's teeth in a single day. It is suitable for people who do not have much time, since four dental implants can be installed right away in a single visit and the patient can get a temporary prosthetic implant. "The All-On-4 treatment is completely painless, as we administer local anesthesia to the patient before performing the procedure. However, if you have a pathological fear of pain and the dentist, the insertion procedure can also be performed under conscious sedation," says Dr. Damir Martinko, owner of Implant Centre Martinko.

The doctor also states that another dental implant technique that addresses the complete loss of teeth in one day is the All-On-6 procedure. An extremely advanced technology, it is based on six implants that are highly reliable, solid, and durable. He explains that, just like the All-On-4 technique, All-On-6 is totally painless and

is performed under local anesthesia or under conscious sedation.

A fixed prosthesis is a reliable long-term solution for tooth loss because it cannot be removed, thus providing patients with additional safety and stability. By using a fixed dental prosthesis, patients will no longer have problems choosing their meals as they can immediately eat all types of food and feel extremely safe, says Dr. Martinko. He also points out that they use the highest quality biocompatible materials and the latest dental technology to provide their patients with the best aesthetic and functional solutions for their smile.

Dr. Martinko states that they also specialize on providing mobile prostheses, which are one of the simplest and cheapest solutions for tooth loss. They allow the patient to regain previously impaired functionality, such as the ability to speak and bite (a correct dental occlusion), and even restore the desired aesthetics to their smile. There are two types of removable prostheses, which we recommend to our patients based on the condition of their teeth as well as their aesthetic desires. The partial mobile prosthesis is used in cases where the patient lacks a reduced number of teeth, while the total mobile prosthesis is used to address the total lack of the patient's teeth, he says.

Aside from fixed implants and mobile prostheses, Implant Centre Martinko also offers other dental services, such as crown dental, veneer dental, and Pontic dental. Our clinic specializes in a wide range of dental treatments and procedures, such as dental implants, supported dentures, crowns, veneers, alongside others that utilize modern technology such as 3D Cone Beam X-ray (CBCT), Panoramic X-ray (OPG), T-Scan (Digital Bite Recording), and Intraoral X-ray (Bitewing) devices for diagnosis, and a Digital Shade-Matching and Dental Microscope items medical treatment facilities, affirms Dr. Martinko.

Implant Centre Martinko is one of the leading dental centres in Italy, as illustrated by the positive reviews and recommendations they receive from many of their previous clients. In fact, they have an average rating of 4.8/5 on Google and 4.5/5 on gcr.org.

One of their satisfied patients, Savino Palumbo, said in a Google review, I was impressed with Dr. Martinko's excellent work, professionalism, courtesy, and efficiency. I was skeptical at first, but when I entered the clinic, I immediately realized that I was surrounded by very good and competent people starting from the staff who assisted me in the clinic, to the doctors who were really good and sure about their work. I highly recommend Implant Centre Martinko.
