

## **Green Builder Announces Global Impact Fund**

*July 02, 2019*

July 02, 2019 - PRESSADVANTAGE -

Scottsdale, Arizona based GreenFeet, Inc is pleased to announce the launch of their Global Impact Fund, an initiative that the company knows will positively disrupt the worldwide construction market. The company is seeking investment from accredited investors, offering a 17.5% annual return.

GreenFeet Inc's Impact Fund is backed by pre-developed land purchases equaling 70% of capitalization at the outset. Within 6 to 10 months the security will be fully platted land with a 2 to 4 times multiple of initial capitalization. Combined with a 17.5% interest offering, fully secured funding and a disruptive, green business model: GreenFeet Inc is offering the ideal investment for any large or small portfolio. Accredited investors can invest directly by [clicking here](#).

The Arizona company is seeking individuals who share their drive to leave a positive impact on the world?through methods that will not harm the environment. GreenFeet has shown a high-profit margin, alongside a high priority on passing along savings to consumers, commercial, and joint venture partners. This is a great opportunity to partner with a renowned company and to be recognized as an impact pioneer that chooses to believe in the purpose of lowering the cost of living worldwide and leaving a net-zero carbon print on planet Earth.

GreenFeet, Inc. was born out of the need to answer a serious societal need as much as giving a better future to our planet, though they are now well known throughout the world for their innovative projects and unparalleled ability to harness economies of scale.

With GreenFeet's Global Impact Fund, accredited investors will have the opportunity to make a high annual return, while residing on the cutting edge of a \$13 trillion dollar industry with a company whose efforts are put towards making a significant change in the world and empowering the end buyer. GreenFeet states that investors will play a critical role in helping the company attempt to solve the worldwide housing crisis, as well as creating a greener, sustainable planet through meaningful and focused enterprises.

GreenFeet seeks to provide a true solution to some of the problems that have been impacting the planet over the past decades. The company asserts that one of its foremost priorities will be the implementation of clean energy throughout the world. This is a resolution that is long overdue and desperately needed though not enough efforts had been put to invest toward this in the past. GreenFeet believes that, through the introduction and widespread adoption of solar energy, we will see a stark change for the better.

The company has already developed and patented some solutions to meet this purpose, as they already utilize advanced mass-production methods, commit ultra-fast job site assemblies, and execute solar integration plans. GreenFeet's projects are already revolutionizing the industry, and they remain uncontested by their peers in the field.

One of GreenFeet's other initiatives include their MicroCity developments, which the company specializes in. These are vertical urban communities designed with high-rise condominiums, townhomes, retail centers, entertainment complexes, hotels, office space, learning centers, and an abundance of park space. The company states that this is also a priority since they will be able to implement the usage of clean energy in these areas, greatly reducing energy consumption and minimizing their environmental impact.

GreenFeet says that the MicroCities initiative will revolutionize the construction industry, since they can be constructed much faster than with regular methods at a significantly lower cost. These are only some of the striking competitive advantages that this alternative has over the traditional construction process. Notably, the company is placing great trust in this initiative as they believe that now is the best time to bring change to the industry that has not innovated over the past 80 years.

The project will also considerably lower overall housing costs, providing a solution to one of the biggest issues faced by people around the world: the affordability of urban housing. GreenFeet's urban alternative will not only be priced significantly lower, but will also be much more self-sustaining saving buyers more money in future service bills. This will also help greatly reduce humanity's global impact on the environment as this method of construction becomes more widespread over the years. Furthermore, this initiative (as well as the

others presented by GreenFeet) is highly scalable, as more low-tech regional factories can be constructed as necessary to meet demand.

For more information regarding GreenFeet's Impact Fund, the accredited investor benefits, and the company's various undertakings, interested parties may visit the website the company has launched for this occasion.
