

## **New Batches Of Energio SLIM Portable Cell Phone Chargers Now Comes With Complimentary Carrying Pouch**

*July 29, 2015*

July 29, 2015 - PRESSADVANTAGE -

Energio, a provider of portable cell phone chargers, announces that its new batch of Energio SLIM battery chargers in Amazon.com now comes included with a free carrying pouch in the package. Energio SLIM is Energio's signature power bank product. As slim as an iPhone, the Energio SLIM is designed to be so slim enough to be put into the same pocket as the cellphone.

The Energio SLIM has a built-in micro-USB charging cable that can be directly plugged into Android phones and other electronic devices that uses a micro-USB port. With its 3850mAh lithium polymer battery, it gives a full charge to medium sized phones such as the LG Nexus 6, Samsung Galaxy 6, and the iPhone 6. For customers who are iPhone users, the Energio SLIM package includes an Apple lightning adapter that to connect to an iPhone 5 or iPhone 6.

With its built-in cable feature, the Energio SLIM is designed to allow the user to have a clutter free experience making pesky tangled cables a problem of the past. However, a few Energio SLIM customers have given feedback that for iPhone users, there is no place to keep the extra Apple lightning adapter in the portable

battery charger. Taking into account the feedback of their customers, Energio is now including a complimentary carrying pouch that allows customers to store their Energio SLIM charger and lightning adapter together.

The founder of Energio, Patrick Loh, explains, "We take our customers feedback very seriously. It is our desire to improve user experience as much as we can. The new carrying pouch that is included in Energio SLIM gives customers the extra option to keep their Energio SLIM charger and lightning in one place they want to. We are confident that our customers will be delighted to have this additional accessory as part of the package when they purchase the Energio SLIM."
