

Implant Centre Martinko Offers Long-lasting Tooth Implants In Italy

July 16, 2019

July 16, 2019 - PRESSADVANTAGE -

Implant Centre Martinko, a private dental clinic in Trieste, Italy, has announced that they are offering top quality and long-lasting tooth implants in Italy. Dr. Damir Martinko points out that dental implants offer a lifetime solution for the replacement of missing teeth. And because they make use of the best and most up-to-date tooth implant technology, patients can be sure that the dental implants they will get are of the best quality and will be long-lasting and will last a lifetime.

Dr. Martinko explains, "Oral hygiene in standard and mini dental implants is extremely important as are regular dental checks. If the patient respects the hygienic rules and follows the dental advice, the dental implant is a permanent solution, in most cases for life. For all these reasons, a growing number of patients today are opting to replace one or more teeth with dental implants."

The tooth implant is an artificial substitute for a tooth that has been lost. It has a titanium anchor that is incorporated into the maxillary or mandibular bone right where the original tooth was previously anchored. Once the implant is in place, it is capable of functioning like a genuine natural tooth.

According to Dr. Martinko, there are many benefits offered by dental implants. One such benefit is that it is biocompatible, which means it does not cause any unwanted reactions. Also, there would be less bone loss after the implants have been inserted. And the neighboring teeth will remain intact. And most important of all is that it enhances quality of life. The patients will no longer need to avoid private and professional encounters and they will regain their self-confidence.

As long as implant placement is possible, the best replacement for the function of the natural tooth is the dental implant. Once the implant has been inserted, it assumes the natural function of the lost tooth. This means the patient would be able to chew food naturally, unlike with dentures. Furthermore, recovery duration is only one day, which means the patient would be able to chew hard food just one day after the insertion without irritation of the gums or inflammation that would need additional care.

Dr. Martinko points out that with proper oral hygiene and regular dental check ups, the dental implant will serve as a long-term solution for loss of teeth. To ensure high quality and durability, the clinic makes use of Straumann dental implants.

Meanwhile, Dr. Martinko also stresses that only one session at the clinic would be needed to ensure that the disruption of the busy lives of patients would be minimal. They apply a protocol in which one or more teeth can be removed in just one day, dental implants are inserted, and temporary prostheses are put in place. This will allow the patients to return as soon as possible to their daily routine.

Unlike the usual dentures, which are mobile dental prostheses, the dental implants are fixed prostheses that cannot be removed, thus offering stability and safety for the patients. Also, patients would be able to eat any kind of food that they want and still feel assured that the implants will not be damaged. And also, they can brush their teeth or floss just as with their natural teeth.

For patients who have lost more teeth, there is the all on four method. In just one dental visit, four dental implants will be inserted and the patients will be provided with a temporary prosthetic implant. The process is completely painless and can be done with local anesthesia or under conscious sedation.

And for patients who have suffered from total loss of teeth, the all on six technique will be used. Here, six implants are installed in just one day. The six implants provide for reliability, durability and stability for the prostheses that will be affixed on them to replace the lost teeth.

Those who would like to learn more about the dental implants provided at Implant Centre Martinko can visit their website or Dr. Martinko's Twitter page at <https://twitter.com/DrMartinko>, or contact them by telephone or through email.
