

Hurricane Reinstatement Solutions Announces New CIPP Lining Tools Distributors

August 05, 2019

August 05, 2019 - PRESSADVANTAGE -

Hurricane Reinstatement Solutions (HRS), a business based in Tucson, Arizona, has announced that they have recently added new distributors that are now selling and promoting the new HRS Tornado lateral reinstatement pipe cutter. These new distributors include Pipelining Supply (PLS), Pipelining Supply Illinois, Pipelining Supply Missouri, Patriot Sewer Equipment, and CIPP Services.

The HRS lateral reinstatement pipe cutter is a patent-pending product, and the company believes it is currently the best lateral reinstatement tool on the market. An important advantage is that it is capable of reinstating pipes in approximately 15 to 30 seconds, compared to similar products that average between 15 to 45 minutes. Another advantage offered by the tool is that it requires little to no sanding, it is capable of making an oval hole in all types of pipes, and it can reinstate dry or full of water in 30 seconds. The company has reported that the HRS reinstatement tool exceeds expectations.

Lateral reinstatement is the process by which the connections between the main pipe and the service laterals patent-pending. The result is that sewage or storm drainage systems will be able to function properly. How this lateral reinstatement was handled has changed drastically during the past 50 years, and the latest

technology on the market, which is the Tornado Reinstatement Cutter, is now capable of reopening the pipe in less than 30 seconds.

Mike Gesty, the spokesperson for Hurricane Reinstatement Solutions, says, ?Most competing cutters are limited to reinstating between 35 and 40 feet of pipe in any given day. The Tornado can easily reinstate a length of 70 feet or more in less than a minute. It uses a single tool capable of handling 40 reinstatements. That same tool can reinstate plastic, wood, steel, clay, or transit.?

The cutters are necessary for rehabilitating severely damaged pipes to return them to working order. The Hurricane Reinstatement Solutions cutters help with the cured-in-place pipe (CIPP) process, which is a trenchless rehabilitation method in which the standard process involves the insertion of fiberglass cloth or polyester felt tube saturated in resin into the damaged pipe. The resin will need to cure over the next day to provide a tight-fitting and corrosion-resistant pipe inside the damaged pipe.

Meanwhile, the HRS Tornado is a patent-pending lateral reinstatement cutter that only takes 15 to 30 seconds to reinstate a service lateral while the nearest competitor will require somewhere between 15 to 45 minutes. Some of its salient features include the capability to make an oval hole in all types of pipes, reinstate a pipe in 15 to 30 seconds, little to no sanding required, reinstate dry or full of water in 30 seconds, reinstate up to 70+ feet in less than a minute, traverse multiple fitting without loss of cutter power, and perform 40+ reinstatements with 1 tool. The tool is all metal, American-made, and anyone can use it. You can also use this same tool for C.I., wood, steel, clay, transit, and more

And with the company?s new distributors, Hurricane Reinstatement Solutions believes that more plumbers will be able to benefit from the new HRS Tornado lateral reinstatement pipe cutter.

Hurricane Reinstatement Solutions is a locally owned and operated company that is based in Tucson. Since the introduction of the Tornado in January 2019, the tool has already performed flawlessly in completing more than 80 reinstatement jobs from one tool. Those who require more information about the HRS new plumbing reinstatement tools can visit their website, or contact them by phone or by email. People can also use an online form on the website to contact HRS. The company has pledged to respond to all Internet-submitted inquiries within 72 business hours.
