

iProven DMT 511 Forehead And Ear Thermometer Is For Kids And Just In Time For The Flu Season

July 30, 2019

July 30, 2019 - PRESSADVANTAGE -

iProven, a business based in Rotterdam, The Netherlands, has announced that their Ear and Forehead Thermometer has been specifically designed with kids in mind, and this is just in time for the approaching flu season. The iProven team members, who are parents themselves, are well aware that parents can worry a lot if their babies or kids have a fever and runny nose, and the last thing they would like to worry about is an unreliable thermometer.

The DMT 511 ear and forehead thermometer has been designed by the team at iProven to be simple and easy to use. Because it is a digital thermometer that uses infrared technology, the thermometer is accurate and fast. Because of its use of advanced technology for detecting even the slightest rise in temperature it has unmatched accuracy and provides a temperature measurement in just one second. This is very important because placing a thermometer on kids for a minute or even several seconds is practically impossible especially when they are sick and irritable.

?As a mom, you want to give your feverish little one as much sleep as possible. After all, sleep is the best medicine. You probably want to keep monitoring the temperature without waking up your baby,? says

Suzanne, a spokesperson for iProven. She continues, "With our thermometer, you can do just that. The mute button makes sure no one hears you taking your kid's temperature in the middle of the night. It only takes a swipe across the forehead to measure the temperature."

Another helpful feature of the DMT-511 ear and forehead thermometer is the fever indicator light. This fever indication light will be green, orange or red, depending on how serious the fever is. This means that the parent is immediately aware if the fever has gone up or has gone down by looking at the color of the fever indication light. This really makes it easy to monitor a baby's fever even in the middle of the night.

Meanwhile, another function of the thermometer that can be useful for parents with babies is its ability to measure ambient temperature. With this function, parents would be able to determine if the baby's bath is of the right temperature, and likewise with the temperature of the baby's feeding bottle. The thermometer will provide an accurate reading within seconds.

The thermometer can be operated either in the Forehead Mode or Ear Mode. The Forehead Mode allows the taking of a person's temperature by simply placing the thermometer on the forehead. This is the usual mode used for all ages. For babies who are six months or older, the Ear Mode may be more suitable because the baby may not tolerate having something placed on his or her forehead. Using infrared technology, the thermometer detects the temperature inside the ear.

Based on customer reviews on their Amazon page, the product has an overall Amazon rating of 4.8 out of 5 stars. This means that most of the reviews are five star reviews. For instance, Katlyn W. gave the thermometer five stars and said, "It is very easy to use and I love the fever indicator lights. It is great that it does both ear and forehead..."

Another Amazon customer, Nathan B. also gave the product five stars and said, "I love this thermometer. I particularly like that I can take the forehead reading when my child is sleeping and it is gentle and quiet and does not wake him up. The readings always seem accurate..."

The company known as iProven has been developing helpful products for the home, particularly with regards to health. Their products have been chosen, developed and enhanced to meet their clinical standards of quality, consistency and durability, without compromising simplicity for the home user. Those who would like to know more about the DMT 511 Ear & Forehead Thermometer can visit their website or their Amazon page, or contact them by phone or by email.
