Crawl Space Encapsulation Solves Moisture Problems in Salisbury

Michael Masserang of Masserang Contracting & Consulting has announced that they are available to service new clients in Salisbury N.C., for any type of waterproof, crawl space encapsulation or crawl space project. He said that one of the biggest problems many homeowners in North Carolina have to deal with is crawlspace moisture and waterproofing crawl space.

The problem with crawl space moisture is that it creates an excellent environment for mold and fungus to grow in. These issues can plague many homeowners because they can lead to poor air quality, which in turn, can become dangerous and costly to the structure of the building. Michael added that many builders are trying to build tighter homes in order to create energy efficient building. This makes crawl space ventilation issues more challenging.

Through the company's many years of experience, and Michael Masserang's 25 years of experience, they feel they have the expertise needed to help homeowners in a variety of services, such as crawl space

waterproofing, basement waterproofing, structural wood repair, and many others. Michael stated that when it

comes to crawl space encapsulation, clients in Salisbury, North Carolina, can rely on the company to provide

a exceptional customer service.

Michael Masserang explains, "My company provides a conduit between clients and qualified contractors and

engineers. The services provided include foundation repair, structural wood repair, basement & amp;

crawlspace waterproofing, and crawl space & patic air quality improvement."

Masserang Contracting & Description of the following areas: Salisbury, Concord, Spencer, Granite

Quarry, China Grove, Faith, Rockwell and Westcliff in North Carolina, as well as surrounding Rowan County

residents. They have a stellar reputation of being a foundation, waterproofing and crawl spaces moisture

specialist.

The company is also able to provide free inspections on residential and commercial structures in order to

analyze and diagnose any problems that have been reported by the client. Once they have completed the

initial inspection, the company will then dispense an appropriate referral so that the client can hire the most

qualified contractor or engineer for crawl space waterproofing or any other specific situation.

Michael explained that today's homes require an engineered solution that is able to fully control moisture in a

building's crawl space. This is especially true when HVAC systems have been installed. More importantly, the

solution must be able to achieve this without creating any additional problems to the building. He added that

those who have questions can contact him. He will be more than happy to answer any questions regarding

any Salisbury NC encapsulation or crawlspace project.
