

BaySaver Offers Hydrodynamic Separators

August 21, 2019

August 21, 2019 - PRESSADVANTAGE -

BaySaver, one of the leaders in protecting water resources using only the best in innovation, is now offering hydrodynamic separators in hopes of offering clean water, free of pollutants. Their dedication to safe, clean waterways is why BaySaver has gone above and beyond to develop their separators to rid water of contaminants and keep them at bay.

BaySaver's BaySeparator is a highly effective, state-of-the-art method for stormwater protection. This three-path system uses density and gravity to separate up to 80 percent of solids from runoff, which keeps it from entering clean waterways. During the first treatment, coarse sediments settle in the primary manhole, while other floatables move on to the storage manhole. This is where contaminants are trapped. Once free of sediment and contaminants, the flow passes through the separator unit, where it passes over the internal bypass plate to ensure the system doesn't backup and recontaminate.

The BaySeparator is both cost-effective and easy to maintain. Once stormwater has passed through the three-path system, the contaminants caught within can easily be removed during routine maintenance.

To learn more about the BaySeparator, visit the BaySaver website.

About BaySaver

BaySaver has diligently worked to rid pollutants from stormwater for more than 20 years. Their goal is to preserve environmental sustainability by preventing pollutants from reaching common waterways. By offering treatment solutions, education, and systems to those involved in the Clean Water Act, they are assisting in keeping the world's waterways safer. BaySaver is dedicated to providing innovative products and proper education in their mission to provide the public with safe, clean waterways. With pollution on the rise, it's more important than ever to help individuals get access to clean, fresh water for a healthy, sanitary lifestyle. BaySaver takes great pride in helping communities achieve this goal.
