

Additive Offering Water Repelling Technology Is Now Available For Bathtub & Tile Refinishing

July 30, 2015

July 30, 2015 - PRESSADVANTAGE -

Bowie, Maryland based Porcelain Tub Restorations have released a new product. TubPotion #16 is a specially formulated additive that offers water repelling technology. It is now available for bathtubs and as a tile refinishing coating. Porcelain Tub Restorations is very proud of their product and the results they have been able to achieve with it.

Paul Burns, from Porcelain Tub Restorations, says, "Water on a hydrophobic surface does not wet the surface, but effortlessly and simply rolls off the tub or tile fixture it was applied too. This is known as the 'lotus effect'."

What is equally impressive is that as the water moves across the hydrophobic surface, it picks up any foreign material and carries it away. This includes soap residue, body oils, dust and any other dirt that accumulates during bathing. This is a truly one of the most revolutionary bathroom refinishing coating systems available on the market today.

Thanks to this process, property owners do not have to clean their bathroom fixtures as often as before.

Furthermore, the effort required during cleaning is greatly reduced. TubPotion #16 is a specially formulated additive that is added to the TubPotion coating system. This is used to reglaze existing bathtubs and tiles. As soon as this is done, the tiles and bathtub look brand new again and are then able to always remain sparkling. In addition, they are easy to clean.

"This 'Self-cleaning' effect is destined to become an important and novel aspect in consumers lives," adds Paul Burns. "With more and more consumers seeing the benefits of having their bathroom fixtures refinished versus replacement due to the exceptional value in reducing bathroom renovation cost, this advancement in coating technology is a tremendous leap forward over other bathroom refinishing coating systems."

The product was developed at TubPotion Labs and has been extensively field tested at BathRenovationHQ.com. During this period of testing, it was proven that customers will instantly be rewarded for choosing this advanced and revolutionary surface treatment. It is built into the coating itself, thereby providing lasting protection throughout the lifetime of the fixture, tile or bathtub that had been refinished.
