

Global Vision Technologies Reports Great Turnout At Case Management Software Conference

August 06, 2015

August 06, 2015 - PRESSADVANTAGE -

St. Louis, Missouri company Global Vision Technologies, Inc. recently attended the FFTA conference in Denver, CO, where they report a great turnout for FAMCare, case management software for human services.

George Ritacco, Global Vision Technologies spokesperson, released this official statement: "We had an excellent turn out at the conference and had great traffic at our table. Attendees were interested in learning more about FAMCare-5 and how it could help them. Special incentives with added bonuses were provided to the early adopters."

FAMCare has been shown to help agencies maximize their productivity, improve overall workflow, and streamline heavy caseloads. The program prompts users of when to take action on critical events, and provides actionable information and reporting for funders. "In short, it is simplified case management," says Ritacco.

FAMCare is fully hosted, nonprofit software for case management. It is designed to assist nonprofit agencies, caseworkers, and program directors in managing clients faster and more efficiently.

It offers unique tools for tracking clients and has various workflow wizards and personalization tools that allow agencies their own competitive advantage and customized setup. It features real time data productivity to show insights into performance, trends, and outcomes.

The system includes provider management, form configuration, incident report management, a dynamic calendar, security configuration, and a number of other features.

The conference was a huge success, with nonprofit agencies learning more about FAMCare and how it can assist them in their daily operations. "We were very pleased with the 3 day event," says Ritacco. "We felt very confident that we not only helped some agencies get started with FAMCare at their operations, but exposed many to different ways they can improve how they collect and report on data at their agencies and we feel just as confident that we can help many more once everyone gets wind of this system."

Global Vision Technologies is a consulting firm, specializing in building custom software solutions for healthcare and human services agencies. FAMCare was designed 14 years ago and was the first web based case management platform of its time. Global Vision Technologies was enlisted to create a system for human services and has continued to improve FAMCare since its inception.

Healthcare or nonprofit agencies who are interested in more information about the software can take the V.I.P. FAMCare Tour to learn more.
