Apex Pest Control Offers Rat Control Services In Leeds

September 11, 2019

September 11, 2019 -
Apex Pest Control - Leeds has announced that they are offering services for rat control in Leeds and neighbouring areas. The pest control firm offers rat control in Leeds and in the whole northern English county of Yorkshire. Their service is customized for each property that requires rat control because they have observed from their experience that no two jobs are the same.

?Our professional rat removal team uses effective control methods to eradicate black rat or brown rat pests for homes and businesses. We follow a simple process: survey, treatment, follow up and prevention,? says Tony Johnson, head pest technician at Apex Pest Control.

He adds, ?We are ready to serve your rat control needs 7 days a week. We are fully insured and we are certified by the National Pest Technicians Association. We are also ready the provide emergency rat services.?

For residential rat control, Apex Pest Control will start by surveying the premises. A thorough inspection is carried out to obtain information regarding the areas where the rats were seen or heard, and possible access points. It is vital for the team to gain access to roof spaces, under the floor, airing cupboards, under kitchen units, and outside areas.

The more areas that they are able to investigate, the better will they be able to prevent a rat from getting in the house or garden. The pest technicians will conduct a mental risk assessment or a written tick box risk assessment. They will look for various signs such as holes, rat runs, droppings, smell, smear marks, gnawing, damage, tracks, dead or live rats, food sources, and nests.

For commercial buildings, the pest technicians will also conduct a site inspection before they will offer a quote for pest control. During the site inspection, they will be looking for entry points, common hiding places, signs of rats, neighbouring buildings, outside premises, and health issues. Before starting the treatment, the pest technician will provide advice on the products used, ongoing pest management, and tips on aftercare.

One way to ensure that a particular pest control company truly offers quality services is through customer reviews and this is true for Apex Pest Control. In fact, in one of their pest control Leeds reviews, Pete H. gave them five stars and said, ?Excellent service from Apex Pest Control Leeds. I was looking for a Leeds pest control company when I found Apex. I needed to get rid of rats at my property in Hyde Park. Tony and Tom give me a top service and advice to stop the rodents. Fast, affordable and I highly recommend them for pest control services.?

For businesses in the food industry, their main concerns are the risk of food spillage and the possible contamination from spilt rodenticide. To overcome this, Apex Pest Control technicians use block formulations. In susceptible areas, non-toxic indicator blocks are contained in tamper-resistant bait stations for rats and mice. The internal bait points will be kept to a minimum and then decreased once the infestation has been cleared.

It may be desirable to have those fixings to walls and floors in production areas. If appropriate for the location, perimeter baits can be used, subject to an environmental risk assessment. These baits should be fixed and tamper-resistant. The internal locations for bait points in restaurants and kitchens will be the same as those used for homes.

Rat control for farms also requires special consideration. Because farms are of different shapes and sizes, the living accommodation will be an integral component of the site so that the domestic animals and children should also be considered. Because of the stored crops and animal feed, bedding, and animal waste present in farms, these are ideal environments for rodent infestation. With the start of the winter months, the rodents will begin looking for warmer places and will enter the buildings. Pest technicians will use fixed tamper-resistant bait stations at specific locations.

Those who want to know more about the cost of rat removal and other details can visit the company website or contact them on the phone or through email.
