

Dynamic Heating And Cooling Releases Blog Post On Air Handling Units

September 12, 2019

September 12, 2019 - PRESSADVANTAGE -

Dynamic Heating And Cooling, based in Brandy Station, Virginia, has announced that they have released a blog post, titled, "The ABCs of Air Handling Units." The article provides a basic understanding of what air handling units (AHUs) are. AHUs are not to be confused with air conditioning units. They are one of the components of air conditioning units and their function is to condition the air and then distribute it within a building. Those who want to check out the blog post can do so at <https://www.dynamiccooling.com/the-abcs-of-air-handling-units>.

Josh Bersee, owner of Dynamic Heating And Cooling, says, "In addition to working with your AC unit, an AHU can be paired with a heat pump to help with warming. So it's clear that the AHU is important in the process of cooling or heating your building and keeping your clients and employees comfortable. There are different types of air handling units based on the size of your HVAC unit, its location and what it can handle."

AHUs get fresh ambient air, clean it, cool it, or heat it, and then send it inside to various parts of a building

through some ductwork. Most AHUs will have another duct where it sucks the used air out of the building and releases it back into the atmosphere. To save on energy, some of the return air may be reconditioned and recirculated back into the building.

Meanwhile, Dynamic Heating And Cooling has a team of experienced air handler maintenance technicians to take care of AHUs and ensure that they are working properly. The company offers a Dynamic Service Plan Maintenance Agreement which can give people peace of mind knowing that their heating and cooling systems are certified for proper operation by the company's technicians.

Preventative maintenance procedures can allow the detection of small problems before they worsen and become serious problems. Should repairs be required at the duration of the maintenance agreement, Dynamic Heating And Cooling technicians will perform all of the needed repairs at a 15 percent discount. Also, the company will provide emergency service 24/7. More information about the services offered by the company is available on their Facebook page at <https://www.facebook.com/DynamicVirginia>.

Dynamic Heating and Cooling offers a broad range of HVAC services in Culpeper and Fauquier counties, Virginia. Their ultimate goal is to make sure that the home or building's indoor environment is comfortable. Also, a properly maintained and installed cooling and heating system will offer the advantage of lower energy costs.

For those who require the installation of a new HVAC system, Dynamic Heating and Cooling technicians will ensure that all of the units that make up the system are of high quality and are installed properly. If they are not installed correctly, the system will not work properly and it may even get damaged in a relatively short time, resulting in costly repairs.

After the HVAC system has been installed properly, it is also a good idea to have the system maintained by a reliable HVAC company. Ideally, the HVAC system must be inspected annually to make sure that every part of the system is in good working condition. It is not advisable to ignore this because even if the HVAC system is providing the appropriate cooling or heating, it does not mean that the entire system is working perfectly. Most issues start as small problems before they turn into bigger problems and it is definitely a good idea to catch them while still small.

In the event that the HVAC system breaks down and no longer provides the cooling or heating that is expected, Dynamic Heating and Cooling technicians can provide the necessary repair services. There are many possible reasons for the breakdown, such as clogged drain lines, clogged filters, burnt out capacitors, worn contactors, blown fuses, malfunctioning gas valves, thermostat problems, cracks in the evaporator coil, and refrigerant leaks. Experienced technicians from the company know how to solve these problems once they have spotted the specific issue.

Those who are interested in one of the services provided by Dynamic Heating And Cooling can check out their website at <https://dynamic-heating-and-cooling.business.site>, or contact them through the telephone or via email. They are open for 24 hours everyday, from Monday to Sunday.
