

Beaumont Cosmetics Is Provider Of The Collagen Beauty Drink In Demand In The Market

September 24, 2019

September 24, 2019 - PRESSADVANTAGE -

Beaumont Cosmetics, a women and minority-owned business based in Orange County, California, makes its introduction as the go-to collagen beauty drink in the market. They have a patented formula with a collagen dose of 20,866mg per serving, which is one of the most potent among all collagen supplement products. They use high-quality collagen to support the body's natural rejuvenation processes, helping generate youthful skin.

Jennifer Chung, CEO of Beaumont Cosmetics, explains the brand's unique formula. "While most ingestible beauty supplements on the market carry type II and III collagen, which helps maintain joints and bones, Beaumont is set apart by hydrolyzed marine collagen peptides derived from red snapper and salmon. Our collagen is ethically-sourced in Japan in GMP certified facilities, and our drink also includes vitamins (C, E, B1, B2, B3, B6) when most competitors are collagen-only." Information about Beaumont's formula can be found at <https://beaumontglobal.com/pages/our-beauty-formula>.

Collagen is the primary structural protein of the body, composed of three twisted chains of amino acids to form the structure of hair, skin, organs, nails, bones, muscles, and joints. As people age, production of collagen naturally slows down resulting in weaker cartilage and thinner skin. Scientific studies have shown that collagen can be one of the most effective natural skin care ingredients to maintain strength and elasticity.

Although collagen is found in protein-rich foods, people ingest it in a state that is too large for absorption into the body. Through hydrolysis, a process that breaks compounds down with water, collagen molecules are made small enough for the body to intake. Beaumont's premium beauty drink provides hydrolyzed collagen and a large amount of amino acids necessary to transform amino acids into collagen, providing age-defying results.

Beaumont Cosmetics utilizes marine collagen because the practice is more environmentally sustainable and

can cater to those who do not consume red meat. Furthermore, marine collagen has a high concentration of hydroxyproline, which is a necessary amino acid for the skin.

Despite the Collagen Beauty Drink containing almost twice the amount of collagen compared to similar products, there is no fishy flavor. Instead, the Collagen Beauty Drink boasts a delicious orange flavor reminiscent of childhood treats.

Beaumont also points out that their products are sustainably sourced. Aside from ingredient sourcing, their glass bottles can be upcycled for unique DIY projects. The Beauty Drink features collagen extracted from fishing byproduct, so there is no additional impact on wildlife populations. The company uses a combination of sustainably farmed and wild-caught fish from the South Pacific.

Chung says, "According to Oceana, a marine conservation group, up to 40% of the world's total catch is considered bycatch. Beaumont is exceptionally proud to do our part in helping our environment by repurposing the waste of the fishing industry, all while creating a safe and sustainable product." Learn more about Beaumont's sourcing on their website: <https://beaumontglobal.com/blogs/collagenstories/how-beaumont-is-sustainably-sourced>.

Beaumont invites everyone of different genders, races, and skin types to experience real results for healthy and glowing skin.
