

LED Lowcountry Provides Turnkey Solutions To Save On Lighting Costs

September 19, 2019

September 19, 2019 - PRESSADVANTAGE -

LED Lowcountry, a top led lighting company based in Bluffton, South Carolina, now provides turnkey solutions to save costs on lighting. The company is giving energy-efficient LED lighting solutions for commercial and industrial facilities in South Carolina and Georgia.

As part of the company's commitment to helping their clients to lower energy and maintenance costs, the ?6 Steps to Maximize Efficiency and Savings? was created. The six-step process serves as commandments on looking for ways to save on lighting costs. The objective of the process is to determine, source, install, and verify the ideal solution.

The first step is the energy audit. On this step, information six hours of operation, electric costs, light levels, fixture types and counts, facility dimensions, and fixture mounting heights are gathered. The data is essential for a roadmap for potential ways to cut electric costs.

It is then followed by project planning and specification. In this part, an outline of an energy-efficient project is laid out. Resources needed for the project are also identified in this step.

On the third step, clients can get incentives and rebates for their energy-efficient products and upgrades. It is then followed by product testing. It is where the proposed solution is being tested.

Following the testing process is the installation management. It is when licensed, and insured installation contractors implement the project. The last part is the project evaluation. It is to ensure that energy solutions are delivered as promised.

?Together, we will uncover the best ways to save energy for your unique facility and your unique business plan. Our customers receive complete, fully installed, and functioning solutions, instead of boxes of products delivered to a loading dock. We want you to gain competitive advantage,? says Joel Rudicil, founder, and president of LED Lowcountry.
