

## **Lip Injections In NJ Offered At Ethos Spa, Skin and Laser Center**

*September 26, 2019*

September 26, 2019 - PRESSADVANTAGE -

Ethos Spa, Skin and Laser Center, based in Summit, New Jersey, has announced that they are offering lip injections NJ residents can benefit from. This means that they are able to provide non-surgical lip augmentation, offering similar results at a fraction of the cost of plastic surgery for people who want to add volume to thin lips or reshape their upper or lower lip. The outpatient procedure makes use of dermal fillers and offers the benefit of having little to no downtime. Also, the results usually become noticeable within 24 hours depending on the kind of dermal filler chosen for the lip enhancement.

Dr. Hardik Soni from Ethos Spa, Skin and Laser Center says, "We are the premier cosmetic spa serving New York and New Jersey, and we've helped thousands of people just like you achieve their dream look with dermal fillers. Dermal fillers safely and quickly reduce wrinkles and fine lines, correct scars, firm the skin, and create contours and symmetry."

He continues, "One of the most popular dermal filler procedures is lip injections. They are a great alternative to plastic surgery, producing similar results and at a fraction of the cost. Whether you want to add volume to thin lips or reshape your upper or lower lip, dermal fillers can help."

Dermal fillers can be used not just for lip augmentation. They can also be used for facial rejuvenation and sculpting; facial symmetry; eye firming; getting rid of fine lines, folds, and wrinkles like crow's feet and lip lines; scar revision, such as minimizing the appearance of acne scars and other kinds of scars; chin augmentation; and earlobe and neck rejuvenation. Those who would like to know more about the various services can check out the medical spa's Twitter page at <https://twitter.com/EthosSpa>.

At Ethos Spa, Skin and Laser Center, they do not just offer lip augmentation through dermal fillers. They also provide various kinds of facial injectable cosmetic procedures. These procedures offer several advantages including surgery-free facial rejuvenation; natural and synthetic alternatives that maximize healing and skin renewal; and a natural glow that can last for a long time.

One alternative is Xeomin, which makes use of the same active compound found in Botox. The medical spa offers this as a great alternative for minimizing wrinkle-causing muscle movement. Among these alternatives are the dermal fillers, which replenish the skin by filling in any hollows, scars, and dents. The synthetic material in the dermal fillers are able to mimic the natural, plump look that is usually observed in youthful skin.

Another option offered at the medical spa is the Vampire Facelift, which makes use of the body's natural chemicals to revitalize dull and damaged skin. This procedure is done by reintroducing healthy blood to the face with microneedles. The result is that it naturally promotes collagen production and tissue growth. Another alternative is the Dysport, which is a unique treatment that focuses on relaxing the facial muscles. This is a non-invasive procedure with results that can last up to three months.

Juvederm is another option offered at the medical spa. It is designed to provide lip fullness, contoured and lifted cheeks, and line and wrinkle reduction. And finally, there is the Plexr Plus Plasma Pen, which takes advantage of plasma technology. The pen is held against the targeted skin, causing heat transfer to the outer layer of the skin. The result is sublimation, where the top skin layer is converted into gas. The treated area will develop a light scab that will fall off within a week, taking along with it any scarred or discolored skin marks.

The medical spa focuses on the provision of minimally invasive and non-invasive cosmetic procedures, including dermal fillers, botulinum injection, laser hair removal, chemical peels, and laser skin rejuvenation. Dr. Hardik Soni has extensive experience with various laser platforms, such as Fraxel, Cutera, Candela, Aesthera, Syneron, and Sciton.
