

iProven Relaunches Digital Thermometer For Babies, Kids And Adults

October 01, 2019

October 01, 2019 -

iProven, a business based in Dordrecht, The Netherlands, has announced that they have recently relaunched the NCT-336 BL non contact forehead thermometer for babies, kids, and adults. The product was temporarily out of stock but the company has revealed that they now have sufficient stock for those who prefer the NCT-336 BL medical thermometer. While thermometers are commonly used to find out if a person has a fever or not, this particular product can do much more. More information about this can be found at their website or their Amazon page.

"It's a tool you can use every day, to measure the temperature of your room, your baby's bath or your little one's food. You'll soon wonder how you ever did without it!" says Suzanne, a spokesperson for iProven.

She continues, "The best thing? You don't have to touch your forehead while measuring. Keep a distance of 2-6 inches between your thermometer and your forehead. That's all it takes to get a reliable temperature indication."

This non contact digital thermometer can be used to take the temperature of things when in the Object Mode.

It can be used to measure the temperature of an object by pointing at it from a distance of 2 to 6 inches. For instance, users can point it at the baby's nursing bottle from 2 to 6 inches, and then click on it to find out if the temperature is too hot or too cold. It can also be used to check the temperature of the baby's bath. Or it can be used to measure the room's temperature, and many other things.

The NCT-336 BL non-contact thermometer can simply be used by pointing at the forehead at a distance of two to six inches and find out the person's temperature within 2 seconds. It has been designed to be sturdy and reliable so that people can readily use it to measure the temperature of various things and be sure that the reading is accurate. It is a truly reliable digital thermometer and parents no longer have to worry about unreliable or contradicting readings. It can also be used over and over again without parents worrying that it might break down.

The NCT-336 BL has been designed to be convenient for use with babies and little kids. This is because it provides fast results, in just two seconds, which means the young one will hardly have time to be fussy while his or her temperature is being taken. Plus, it has a mute function, which means that mommies and daddies need not worry about waking their little one because of the beep or alarm. And, of course, because it is non-contact, there is no need to touch the baby, which means he or she may not even be aware of it.

Moms and dads will also no longer have to be confused on whether the baby has a fever or not. The display's color and an alarm will warn them if the temperature is elevated (yellow) and when there is a fever (red). The display color is green if the temperature is normal so parents need not even read the actual temperature on the display to know that they have nothing to worry about.

And finally, the NCT-336 BL is an all-in-one thermometer. Although it is often used for taking body temperature, it has also been calibrated to measure the temperature of an object, and even a room. It is therefore a must-have for parents who have a new baby. It also comes with a 100 days money back guarantee, which means those who are not satisfied with it can return it within 100 days, no questions asked.

iProven develops home health products just like the NCT-336 BL that can be used by people to help in caring for their own health and that of their family members. Those who require more information about the digital forehead thermometer and other similar products from iProven can view their website or their Amazon page. Those interested may also want to contact them on the telephone or via email.
