

DMT-316 Digital Baby Thermometer For Ear And Forehead Back In Stock

October 01, 2019

October 01, 2019 - PRESSADVANTAGE -

iProven, a business based in Dordrecht, The Netherlands, has announced that the DMT-316 no touch digital thermometer for kids and adults is back in stock, just in time for the flu season. It has been designed for ease of use because it can measure the temperature of person without touching. With the flu season starting, parents can be worried that their kids have caught the flu and will want to check on their children's temperature from time to time. This is hassle-free with the DMT-316, which is why many people have been requesting for it and the company simply had to listen and put it back on stock.

"Looking for a reliable thermometer for the entire family? Look no further. Our DMT-316 is the solution for spot-on temperature measurement at any age," says Suzanne, a spokesperson for iProven.

She continues, "When the health of your loved ones comes into play, nothing but the best is good enough. You don't want to double or triple check your child's temperature. All you want is consistent and reliable results, without any effort. Our clinically tested thermometer gives you all of this without compromising the ease of use."

A key feature of the DMT-316 digital ear and forehead thermometer is that it can take super fast measurements. Through the forehead, it can provide the reading in just 3 seconds by swiping. Through the ear, it can provide the reading in just one second after clicking. It is understandable why this device would be requested by many people, because it means people, especially parents, can now avoid the hassle of thermometers that took 1 minute or even 2 minutes to provide a reading that may not even be accurate.

Meanwhile, iProven has also taken into account those nights when parents are worried that their kids or even themselves have caught the flu. With the DMT-316 being able to provide an accurate temperature reading in 1 to 3 seconds, people can check as often as they want. Because it does not require touching the person while taking his or her temperature, it can be used at night without disturbing people's sleep.

Also, the DMT-316 comes with an intelligent fever warning system. This takes out all the guesswork with the user no longer needing to remember what exactly is the temperature that indicates a fever. This is because the display has the color green if there is no fever, orange if the temperature is a bit elevated, and red if there is a fever. This also means that it can easily be used at night because of its lighted display, and users need not even look at the temperature reading. All they need to know is what color is the display. If it is green, they have nothing to worry about and can simply go back to sleep. If it is red, then they can take the necessary precautions for taking care of feverish person.

Suzanne adds, "Our DMT-316 is the solution for spot-on temperature measurement at any age. No more worrying whether someone has a fever or not. And with each reading taking only 1 to 3 seconds, parents can check the temperature of the whole family in just a minute."

Furthermore, fast and consistent results can be expected from the DMT-316, at all times. This flu season, parents can take a great load off their minds. All it would take is a few seconds to find out if their children, and even themselves, have a fever or not.

And finally, iProven offers a 100 days money back guarantee. This means that if people are not satisfied with it within 100 days after purchase, for whatever reason, they can return it and get their money back.
