

iProven Relaunches The DMT-316 Digital Kids And Adults Thermometer For Ear And Forehead

October 01, 2019

October 01, 2019 - PRESSADVANTAGE -

iProven, a business based in Dordrecht, The Netherlands, has announced that they have relaunched the DMT-316 no touch digital thermometer for kids and adults. The DMT-316 has been out of stock for some time but people have been requesting for it, that is why the company had to make it available as soon as possible. Fortunately, it has been made available just in time for the flu season, when parents are worried that their kids might have caught the flu.

Suzanne, a spokesperson for iProven, says, "Super fast and easy measurements, that is what people can expect from the DMT-316. For forehead measurements, in just a swipe, the reading can be taken in 3 seconds. For ear measurements, in just a click, the reading is available within 1 second."

She continues, "Consistent results is what people have been asking for. And thanks to advanced clinical testing, you can rely on our DMT-316. It will give you consistent results, over and over again. No need for double or triple checking anymore!"

During those nights when parents are worried that their kids, especially their baby, might have caught the flu,

it only takes a few seconds for them to have peace of mind with the DMT-316. And they need not disturb their children's sleep because it only takes a few seconds to take a reading, without touching the child. And most of all, the digital display has a backlight, whose color is consistent with the results. If the color is green, the temperature is normal. If it is orange, the temperature is elevated, and if it is red, that person has a fever. Thus, if the display is green after taking a reading, parents no longer need to worry and get back to sleep. If the color of the display is red, they will know the child has a fever and they can take the appropriate action.

Suzanne adds, "The DMT-316 forehead and ear thermometer even comes with a pouch, for clean and easy storage." This means that the device can be ensured to be clean while it is stored in the drawer, ready for the next use. In addition to the cap that covers the probe of the thermometer, the pouch will protect the device from contaminants, thus making sure that it is clean and ready for use the next time it is needed.

The dual mode function of the DMT-316 allows either forehead measurement or ear measurement. To ensure accuracy, especially for babies, the ear function can be used. For fast temperature measurement, the forehead function can be chosen as it is easy to swipe across the forehead and get a measurement within three seconds. For the ear function, the cap will have to be removed so that the probe can be directed towards the baby's eardrum, offering a more accurate body temperature measurement. And there's no need to jot down the temperature reading on a piece of paper. It has a memory function that can store up to 20 readings. By simply pressing a button, the user can go through the previous readings and monitor a person's temperature for a certain period of time.

Suzanne says, "All you want is consistent and reliable results, without any effort. Our clinically tested thermometer gives you all of this without compromising the ease of use." This means parents will have no worries, especially this flu season. They can make sure if their children have the flu or not. And iProven provides a 100 days guarantee. This means that if customers are not 100 percent satisfied within 100 days of purchase, they can return it and get their money back, no questions asked.

iProven is provider of a wide range of home health products like the DMT-316 that people can use in taking care of their loved ones. Those who are in need of a digital kids and adults thermometer and other similar products from iProven can head to the company's website or their Amazon page. They may also want to call them on the phone or contact them via email.
