

## **Dentist In Flushing, NY, Celebrates 62 Years Of Patient Care**

*August 04, 2015*

August 04, 2015 - PRESSADVANTAGE -

Dr. Peter Rumack in Flushing, NY, recently celebrated the 62nd anniversary of his dental practice. His dental office first opened in 1953, and today is revered as one of the leading dental implant practices in the Flushing area.

"I am available whenever my patients need me," said Dr. Rumack. "I want to be completely accessible to anyone who requires dental care, from regular checkups to implants."

Dental implants are permanent replacements for lost teeth. They offer a stronger foundation for tooth replacement than traditional dentures. Implants provide both an aesthetic and functional solution to tooth loss. Unlike traditional dentures, implants are not removed by the patient. They are permanently placed in the jawline and work just like real teeth in that they will not come out unless the dentist removes them.

Dr. Rumack offers computer guided surgery for preciseness. He has been offering dental implants Flushing residents have been taking advantage of for many years, and he and his staff stay abreast of the latest technology and procedures, in order to provide the most updated treatment possible.

Dr. Rumack is a Flushing dentist who graduated from the Columbia University College of Dental Medicine. He is a member of many dentistry groups, designed to review dental care issues regularly, including the American Academy of Implant Dentistry, the American Dental Association, and the New York State Dental Society.

His patients are thoroughly satisfied with his services. "We love Dr. Rumack and his entire staff," says Melinda. "My kids actually look forward to visiting the dentist."

Alexander, a dental implant patient, agrees. He says, "Dentures just weren't working for me. Dr. Rumack suggested implants and although I was a bit hesitant at first, I truly believe this is the best thing I've ever done for myself."

Dr. Rumack and his staff are available for consultations or to answer questions that patients may have. They offer a comfortable office atmosphere, designed to put patients at ease when they require dental work. Along with implants, Dr. Rumack's practice provides a number of other dental treatments including fillings, teeth whitening, and routine maintenance. Dr. Rumack explains that this is to "ensure that our patients always have beautiful smiles."
