

Pest Control of Tamarac Announces Merger

September 04, 2020

September 04, 2020 - PRESSADVANTAGE -

Pest Control of Tamarac announced recently that they will be merging with another unnamed pest control company. The merger states that Pest Control of Tamarac will receive brand new pest control equipment, new pest control utility vans, and five new employees. The new pest control equipment is next gen equipment that just came out. The equipment has only been used a couple of times and will be great for the company to use in their everyday pest treatments. The utility vans will help the exterminators get to their destinations faster and more reliably. The new employees will help the company help more people with pest infestations than ever before.

The company has been providing pest control services to Tamarac, Florida for over a decade. They have helped thousands of families and countless business owners with every type of pest infestation. They offer custom services that are specifically designed for each type of pest. This means the exterminators perform their treatments in the most effective, efficient, and long lasting way possible all while keeping everyone safe. These custom services are the most popular amongst others that the company offers. They also provide emergency services for dangerous circumstances as well as routine checkups. Their routine checkups are great because they make sure that the pests stay away from the target property and have no way of getting inside.

Pest Control of Tamarac has been extremely busy recently because of the rapid increase in pest infestation cases. The president of the company recently spoke about this rise in infestations and the impact it has had on the company, "The rise in pest infestations is a major problem because pests spread extremely quickly. The problem will only get worse without professional services. The main reason for this increase is because everyday treatments like over the counter products don't work like they used to. The pests have adapted to average pest sprays and pest traps. Due to this, we have been extremely busy trying to keep up with the battle against the pests in our area. This merger is going to help us better defeat these pests. I am excited for our new employees to start work because each one of them is very talented and I know they are going to do a great job at fixing any pest problem they are challenged with."

The company is open from 8 a.m. to 5 p.m. on weekdays and from 8 a.m. to 1 p.m. on Saturdays. They are a reliable company that can take care of any pest infestation in the area. They can be contacted by phone or on their website at <http://pestcontroltamarac.com/>. ?Never underestimate pests. Once inside of your property, they will spread quickly and take over your house or business. If you notice a pest in your building, don?t hesitate to give us a call, ? said a representative of Pest Control of Tamarac.
