

Keenhealth Announces That Their Pet Thermometer With Small Flexible Tip Is Back In Stock

October 09, 2019

October 09, 2019 - PRESSADVANTAGE -

Keenhealth, a home health products business based in Denver, Colorado, has announced that their K-PT-678 rectal thermometer for pets is now back in stock. This thermometer is what is needed when people notice that their pet seems to be feeling a little under the weather. Families can monitor the temperature of their dogs, cats or other small pets with the K-PT-678 thermometer, which measures their temperature quickly and quietly. This digital thermometer has a small and flexible tip so that man?s furry friend will hardly feel it and won?t be fussy while its temperature is being taken.

Lily, a spokesperson for Keenhealth, says, ?As part of your family, your furry best friend deserves only the best. When your dog or cat feels a little under the weather, it can be a tricky endeavor. Pets aren?t generally known to sit still, making it difficult to obtain an accurate temperature reading.?

She continues, ?With Keenhealth?s digital thermometer, it?s made easy. This thermometer was developed with a pet?s overwhelming enthusiasm and eagerness in mind.?

It is important to note that the normal body temperature of dogs and cats is different from humans. Thus, it

may be a good idea to ask the veterinarian about a particular pet's normal body temperature range. Usually, the normal range for these pets is 101 to 102.5 degrees Fahrenheit. If the temperature rises to more than 104 degrees Fahrenheit or drops below 99 degrees Fahrenheit, it is advisable to take the animal to the vet.

Meanwhile, while it is possible to take the temperature of a pet dog by placing the thermometer in the armpit area, this will generally take longer when compared to rectal. Also, the temperature reading will usually be about one degree Fahrenheit lower than the actual body temperature. Thus, the better way to check a dog's or cat's temperature is through the rectal way of taking the temperature, using a pet thermometer like the K-PT-678. Family members need not worry about hygiene because this thermometer has a waterproof tip, which means it can be washed thoroughly with soap and water without damaging it.

The K-PT-678 thermometer was developed in consideration of the likely difficulty of taking a pet dog's or pet cat's temperature rectally. First of all, the tip is small and flexible to minimize any discomfort that the animal may feel when inserting the tip to take a temperature measurement. It has also been designed to provide an accurate measurement in just 25 seconds or even less. And it is waterproof and easy to clean. Thus, with this thermometer, it is easy to monitor a pet's health.

Pets can also get sick, just like humans. For dogs, there may be a number of signs that they are ill. These include bad breath or drooling, too much drinking or urination, change in appetite, sleeping more than usual, labored breathing, change in bowel movements, and more. High fever in dogs may also be a negative sign. That is why pet thermometers like the K-PT-678 are important. Thermometers designed for humans are usually not fit for taking the temperature of animals. And pet owners need to ensure that they use a thermometer like the K-PT-678, which has a small and flexible tip, and then gently insert it inside the rectum and wait for the beep.

If the body temperature of the dog or cat is higher than 106 degrees Fahrenheit, this is a medical emergency and must be treated as soon as possible. This is because a fever that is higher than 106 degrees Fahrenheit can cause damage to their organs. Applying cool water to their fur can help but pet owners should monitor their temperature so that when the body temperature reaches 103 degrees F, they should stop the cooling procedure. It is not a good idea to bring down the temperature fast.

Those who are interested in learning more about the rectal pet thermometer or other similar products from Keenhealth can check out their Amazon page.
