

Keenhealth Digital Thermometer With Double Digits Decimal Points Back In Stock

October 11, 2019

October 11, 2019 - PRESSADVANTAGE -

Keenhealth, a home health products company based in Denver, Colorado, has announced that their K-DT-429 GR digital thermometer with double digit decimal points, is back in stock. While this particular thermometer had been unavailable for some time, they are happy to announce that it is finally back. This medical thermometer has been approved for use for babies, kids, and adults.

With the K-DT-429 GR, the temperature can be taken orally or rectally and aside from being highly accurate, it provides the reading in just 20 seconds. And to make it easier for the users, it is equipped with a fever alarm. After a temperature measurement has been made, the digital thermometer emits a beeping sound to alert users that a fever has been detected so that they can take the necessary actions.

Lily, a spokesperson for Keenhealth, says, "We're so excited and happy to announce that the K-DT-429 GR digital thermometer is finally back in stock. This particular thermometer has been quite in demand not just because it is accurate and fast. It is also versatile because it can be used by the whole family, that is for the baby, the kids, and even adults. And it can be used orally or rectally, giving family members options to allow them to take the temperature the way a particular person prefers it."

A unique feature of the K-DT-429 GR baby thermometer that can also be used for kids and adults, is that instead of the usual single digit after the decimal point, it has two digits. Thus, users can be sure that it provides the exact temperature. And it has been provided with a small and flexible tip, which means that it won't cause discomfort even if used to take the temperature rectally. This is particularly important for babies and young kids. It is only natural for the little ones to be fussy if they're not feeling well. Therefore, getting their temperature the rectal way could prove to be a challenge. Fortunately, the tip has been made flexible and the reading will only take about 20 seconds.

Meanwhile, the fever alarm feature of the K-DT-429 GR digital thermometer makes it convenient for use by anyone. This is because the user need not be familiar as to what temperature would be classified as a fever. Users will simply listen for the beep so that if there is none, they can heave a sigh of relief because there is no fever. But if there is a beep, they would be able to do what is necessary to control the fever and then bring the baby or kid to the doctor.

Lily wants to point out that this digital thermometer will prove to be valuable during the flu season. Parents will naturally be worried that their babies and kids might catch the flu. The CDC has advised people to get a flu shot as a way to minimize the risk of getting the flu. However, newborns who are under six months do not have a flu vaccine that has been approved for them. Thus, parents will need to be on the alert for any symptoms, such as a fever. With the K-DT-429 GR digital thermometer, they can easily check the baby's temperature to find out if he or she has a fever. The temperature can be taken rectally without much risk of the baby complaining because of the flexible tip, which can even be used with petroleum jelly or baby oil to make insertion much easier. And with just 20 seconds to wait, the baby will hardly have enough time to be fussy about it.

Parents and other family members can easily keep the thermometer clean and hygienic. This is because it is waterproof, which means users will have no worries that the thermometer will get damaged when they clean it with water and disinfectant.

Those who would like to know more about the K-DT-429 GR rectal baby thermometer that can also be used orally and for kids and adults, or other similar products from Keenhealth can check out their Amazon page.
