

Keenhealth Announces Availability Of Digital Thermometer With Double Digits Decimal Points

October 11, 2019

October 11, 2019 - PRESSADVANTAGE -

Keenhealth, a home health products business based in Denver, Colorado, has announced that their K-DT-429 GR digital thermometer with an accurate reading of up to two decimal points, is back in stock. This thermometer had been unavailable for some time and the company is happy to announce that it is finally available once again. This is a medical thermometer that can be used not just for babies, but also for kids and adults.

"We're so glad that we have been able to bring back the K-DT-429 GR digital thermometer in the market. It is a versatile device because it can be used by the whole family and not just for the baby. This means, the whole family need only have this one medical thermometer to check if someone in the family has a fever. Furthermore, it can be used orally or rectally. For the baby, the best way is to use it rectally because it is the most accurate way of getting the baby's temperature and taking the baby's temperature orally will can be a challenge. For other members of the family, they may want to use it orally. No worries because the thermometer can easily be cleaned and disinfected as it has been designed to be waterproof," says Lily, a representative for Keenhealth.

With the K-DT-429 GR, it is possible to take the temperature of the baby or any member of the family, orally or rectally. It can easily be used by anyone in the family as it is equipped with a fever alarm. What this means is that the users need not even be familiar as to the temperature at which a person is considered to have a fever. If the thermometer emits a beeping sound after the temperature has been taken, that person has a fever. That means parents and other members of the family can do what is necessary to bring the sick person's temperature down and possibly even bring that person to the doctor. This is particularly helpful during the flu season because controlling fever and counteracting the flu with the proper medication as early as possible is advisable to prevent serious complications.

Very few digital thermometers have two decimal places in their readings. This means that the K-DT-429 GR adults, kids, and baby thermometer provides the exact temperature. Plus, the reading will only take 20 seconds, meaning the baby and young kids will hardly have enough time to be fussy while their temperature is being taken. And it is equipped with a fever alarm, which means that those who are using it need not even be familiar with what temperature that can be considered as indicating a fever. Parents will only need to listen for the beep. If there is a beep, they can take the necessary measures to control the fever and they can bring the baby or kid to the doctor for consultation.

This flu season, the K-DT-429 GR digital thermometer will prove to be a useful device for parents and other family members. Parents are especially worried that their children might catch the flu because it can have serious complications. What is needed is for them to easily check if their child has a fever so that they can take the necessary actions like bringing the child to the doctor to find out if it is really the flu so that the appropriate medication can be provided to the sick child.

Babies are especially vulnerable because their immune system has not yet fully developed, which means they are at high risk of having serious complications. With the thermometer available at home, they can check the baby's temperature in 20 seconds so that they can bring the baby to the doctor if a fever is present so that the appropriate medication can be provided and the proper measures can be taken.

People who are interested in the K-DT-429 GR rectal baby thermometer that can also be utilized orally and also for kids and adults, or other similar products from Keenhealth can visit their Amazon page.
