LED Lowcountry Helps Customers Score Big Rebates

October 11, 2019

October 11, 2019 -
LED Lowcountry, the Top LED Light Manufacturers in Lowcountry, provides its customers in South Carolina and Georgia a vast advantage to score significant rebates from utility companies.

Founded in 2013, LED Lowcountry is a Bluffton-based company that provides energy-efficient lighting solutions for commercial and industrial facilities throughout coastal South Carolina and Georgia.

Nowadays, utility companies provide rebates for businesses that make an effort to reduce their energy costs and consumption. In fact, they have an annual budget for rebates.

With the growing population, the demand for power is likewise growing. Thus, utilities have to implement rebates to curb the need to invest in expansion. Investing in a new power plant would be more costly for utility companies.

Utilities offer rebates in response to individual state Public Utilities Commission (PUC) established energy savings goals as an alternative to new power plant expansion. Utilities in nearly every state offer rebates for LED lighting. The programs are aggregated in the federal DSIRE (database of state incentives for renewable and efficiency) and local utility sites.

With energy savings programs and rebates, it encourages businesses to become more energy-efficient on their own.

LED Lowcountry, an Energy-Efficient LED Lighting in Lowcountry, help businesses dramatically lower energy and maintenance costs while delivering superior lighting for less. They provide energy-efficient lighting solutions for commercial and industrial facilities throughout coastal South Carolina and Georgia. They offer Industrial Lighting, Warehousing, Manufacturing, Commercial Lighting, Gated Communities, Hospitality, Education, and Sports.

To benefit from the rebate incentive program, the client must apply for it before commencing the project. Clients will need to provide details about current consumption, fixtures in use, and state what LED products to install. The client shall provide a specification sheet for the LED products. A representative from the utility can then visit the business to confirm the details.

Upon approving the project, the client must a set period to complete the work and send a confirmation form to the utility so they can issue the rebate.

?LED Lowcountry provides turnkey energy-efficient lighting solutions for commercial and industrial facilities throughout South Carolina and Georgia. We help businesses dramatically lower energy and maintenance costs while creating a brighter and safer work environment. We are an independent resource committed to finding the right solution for your unique facility,? the company claims.
