

# Importance Of Professional Tree Services In Ann Arbor Stressed

*November 08, 2019*

November 08, 2019 - PRESSADVANTAGE -

Ann Arbor Tree Removal, a company based in Ann Arbor, Michigan, has announced that they want to stress the importance of tree care provided by a professional tree care company. Such companies have arborists who are certified and licensed and are knowledgeable and experienced in the proper assessment and management of any tree project. This could include the removal of trees, the removal of tree stumps, tree trimming and pruning, cabling and bracing, lopping, fertilization, stump grinding, and lot and land clearing.

A spokesperson from Ann Arbor Tree Removal says, "It is important to have the job done by those who know how to get it done safely and efficiently. They should be fully licensed and insured. And it is absolutely critical that you go with a tree service provider who is insured and takes the right safety precautions as an amateur unlicensed tree technician can cause further damage to the property and put you in a mess. Such a tree care company must also comply with the highest safety standards of the International Society of Arboriculture (ISA)."

One of the key services of a company like Ann Arbor Tree Removal is removing some trees for aesthetic, landscaping, functional, or emergency reasons. A professional tree care company is knowledgeable on how

to properly remove a tree while making sure that the rest of the property remains intact and looking great. Sometimes, trees that have to be removed are in locations that are difficult to access and this requires the use of tree climbers, cranes, bucket trucks, and other techniques to get the job done safely and properly.

Stump removal and grinding is another service that can be provided by Ann Arbor Tree Removal. Stumps may need to be removed because they can be dangerous to children playing in the yard. They can also be dangerous to other trees and plants because they can be used as nests by insects, pests, parasites, fungi, and diseases and these can spread to the other plants and trees in the yard. Furthermore, tree stumps can make lawn care more difficult and time consuming. With the use of an industrial stump grinding machine, the stump can be removed while also providing free mulch for the garden. Or customers can have the resulting debris hauled away from the yard.

Another important tree service that can be provided by Ann Arbor Tree Removal is tree trimming and pruning. This should be done by professionals to ensure that it does not result into uneven tree growth or damage the tree. Tree care companies have the necessary tools and equipment to perform the trimming or pruning properly. They have cutters, trimmers, high-end chainsaws, and more that could get the job done quickly and efficiently. The professionals at Ann Arbor Tree Removal have 30 years of experience in tree care. They can also perform tree fruit pruning to maintain proper tree size and boost yield.

Tree health and fertilization services can also be provided. Arborists or tree experts are knowledgeable on how to keep trees healthy, thus allowing people to avoid having sickly trees that may need to be removed later on. These tree experts have the necessary experience regarding the various kinds of tree pests and diseases and would be able to diagnose and suggest a solution to enhance the health and well-being of trees in a particular yard.

Tree fertilization is essential to ensure that trees get the right nutrients and remain healthy and increase their ability to fight disease. Even sick trees would be able to become stronger in fighting infection when they are provided with the proper fertilization. However, it is advisable for homeowners not to simply purchase any fertilizer because this can cause further damage in some situations. It is essential to get the recommendations of an arborist or tree expert on what kind of fertilizer should be used.

Homeowners and property owners who need a tree service company can visit the Ann Arbor Tree Removal website. They are open from Monday to Sunday, 24 hours a day.
