Solarus Tech Extends Network Management Support To Small Businesses in New York

November 04, 2019

November 04, 2019 -
Solarus Technologies (Solarus Tech) is providing valuable IT (information technology) support to small businesses as the Best Network Management Company in New York City.

Network management is an IT (information technology) service that involves the process of managing a network using various tools and technologies to keep up with the business requirements. It is one of the struggles of companies due to the complexities of multiple network management tools being used. But Solarus Tech answers this dilemma through their managed IT services. Their network management service aims to achieve an error-free network for the company.

Solarus Tech was founded to address the customer service gap typically found with technology services firms. They especially provide IT solutions for small businesses.

?Solarus Tech differentiates itself by providing consistent, reliable, and unparalleled customer service with everything we do. It doesn?t matter if we are running a single cable, installing a new computer, or designing and implementing a state of the art infrastructure, we always have our end goal of creating raving fans in

mind,? the company states on their website.

The company?s network management system involves the following processes: network administration, network operation, network maintenance, and network provisioning.

Network administration focuses on tracking and keeping an inventory of the various network resources such as monitoring transmission lines, hubs, switches, routers, and servers. It also monitors the business performance and updates its associated software.

Meanwhile, network operation involves smooth network functioning as designed and intended, including close monitoring of activities to quickly and efficiently address and fix problems as they occur and preferably even before users are aware of the problem.

Another aspect of network management is network maintenance. It seeks to provide timely repair and necessary upgrades to all network resources. It also secures preventive and corrective measures using close communication and collaboration with network administrators.

The last process is network provisioning, which involves calculating the load needed by the network, as well as future demands, based on the current network trend.

?We are the Top Network Management Provider in New York City because we provide consistent, reliable, and unparalleled customer service in all our projects,? the company claims.

Aside from network management, the company also provides the following IT support services: business continuity, offsite backup, domain name management, virtualization, and consolidation, cloud hosting, hosted email service, vendor management, IP telephony, and storage design.

The business IT support firm has clients in over 40 locations worldwide. They serve a variety of business profiles, including non-profit/non-government organizations, small businesses, recruiting business services, and startups.

To understand more about network management, visit the company?s website at www.solarustech.com. Clients can also visit the Solarus Tech?s headquarters located at 14 Penn Plaza Suite 1402, New York NY 10122. Their phone number is 212-660-0990.
