

Tankless Water Heaters Lower Your Bills, According to Majewski Plumbing

November 18, 2019

November 18, 2019 - PRESSADVANTAGE -

Majewski Plumbing & Smart Homes, based in Villas, New Jersey, is changing the plumbing game with their push for tankless water heaters. Majewski's clients claim that their upgrade to tankless water heaters, particularly Navien, have actually reduced water and electric bills while also allowing the homeowners to go green.

A water heater that is not tankless uses more water, as it takes longer for the hot water to reach the faucet, thus more water consumed. And more water consumed means the system has to heat for a longer period, which means higher electric bills.

Frank Majewski, owner of Majewski Plumbing & Smart Homes, says, "Fifty percent of the energy loss experienced by most hot water heaters comes after the water is heated and is sitting in the tank waiting to be used - like keeping a flame on your oven just to keep the kettle hot. Water heaters that are tankless, such as Navien, heat water on demand, thus eliminating the loss of energy from the water sitting in the tank waiting to be used."

And the savings do not just come from the reduction in the consumption of water and electricity. Homeowners may also be able to get a tax break just by installing a tankless water heater. New Jersey residents can get \$800 in rebates on their taxes for the first year. Furthermore, tankless units usually last five to 10 years longer than regular water heaters with tanks and come with an unmatched industry warranty of 15 years on heat exchangers.

Specifically, Majewski Plumbing & Smart Homes recommend the Navien tankless water heater. The Navien NPE series tankless water heaters are designed to provide an endless supply of hot water for homes of any size. There would be no longer any need to worry about people using up too much hot water when they take long showers, particularly larger families.

The Navien tankless water heaters also provide other benefits aside from the fact that they are much more efficient from the standard water heaters. These include Energy Star certification; the highest energy efficiency in the industry of up to 0.97 UEF / 0.99 EF; the fact that it will require about 80 percent less space than the old fashioned water heaters; the fact that it will last longer than regular tank heaters; easy to use control panel; cleaner and more elegant appearance; improvement of home's resale value; and the fact that it is ideal for new construction or replacements.

It should also be noted that the Navien primary condensing stainless steel heat exchangers are environmentally friendly because they are designed to recover extra heat that would have been lost in non-condensing tankless water heaters. This decreases energy consumption and carbon dioxide emissions. Meanwhile, the average operating cost, as computed by Majewski Plumbing & Smart Homes is much less when compared to other tankless water systems. Those who are planning to have their water heater replaced by a more energy-efficient one may want to check on the Navien Tankless Water Heater and Majewski Plumbing & Smart Homes can help with the installation.

Frank Majewski points out that having a high-efficiency water heater is important when deciding to go green. Water heater efficiency is determined through the heater's energy factor or EF. This is obtained by computing the amount of fuel energy that eventually comes out as hot water from the tap. High-efficiency gas-fired water heaters often have a maximum EF rating 0.62 or higher. In contrast, a high-efficiency electric water heater can have an EF as high as 0.96 or higher. The Navien tankless water heater has an EF of 0.99.

For those concerned about the upfront cost of replacing their old water heaters with a new, more energy-efficient Navien, Majewski Plumbing also has the answer for that as well with their partnership with Hearth, an extremely low-interest finance company specifically for home projects and homeowners. As Frank expanded into Stone Harbor and Avalon with his plumbing services, many clients wanted the ability to pay in installments for custom plumbing projects or home upgrades. "Hearth was the answer to that issue. Now you can finance a large remodel, or even something as small as a new Navien Water Heater if you don't have the cash lying around. It's been a go-to for my customers that have wanted to fix an old bathroom for years but never had the upfront savings to do it."

It should also be noted that Majewski Plumbing & Smart Homes offers plumbing and other services. They can even provide customized plumbing, accommodating almost any kind of custom plumbing request, from shower remodeling to custom luxurious bathrooms with multiple/modern shower heads and custom tiling. They also provide Flo (by Moen) smart valves that are not just able to stop leaks but are also capable of being voice programmed, which means homeowners can issue a voice command for the shower to turn on, or for the system to turn off the main water valve if a leak is detected, thus preventing water damage.

Those who are interested in Navien's Residential Water Heaters can visit the Majewski Plumbing & Smart Homes website or contact them on the telephone or via email.
