

Flaskdata Participates in Medica 2019 in Dusseldorf

November 18, 2019

November 18, 2019 - PRESSADVANTAGE -

17 Nov 2019, Basel, Switzerland: Dr. Tigran Arzumanov, VP Business Development of Flaskdata.io, the leader in automated detection and response for medical device clinical trials, will be meeting customers at Medica, the biggest global medical device trade-show, in Dusseldorf on 19-21 November 2019.

Flaskdata specializes in supporting clinical development and cybersecurity of medical devices. Its innovative patient compliance automation platform is indispensable in the clinical studies involving medical devices used for treating chronic conditions.

"A number of devices in chronic indications need to be applied by the patient," says Dr. Arzumanov. "Good examples are pain and gastroenterology. Patient compliance in such studies can make or break the whole development program. Add to this the fact that device performance is often linked with medication intake by the patient, and the need to monitor and assure patient compliance becomes paramount. The fast detection and patient engagement capabilities of Flaskdata.io reduce burden on both patient and PI.?"

Another advantage Flaskdata brings is its ability to easily and securely connect to data streams provided by connected devices. Flaskdata's real-time API connectivity enables ingesting silos of data (site source data, EDC, lab data, tracker and device data) into a single time-series. Automated detection and response enables

the study team to monitor study performance in real time, reducing or eliminating the need for manual monitoring and obtain an immediate picture of the study.

Tigran Arzumanov can be contacted at tigrana@clearclinica.com.

About flaskdata.io

Typically, it takes 1-5 weeks for study monitors to log deviations. Flaskdata specializes in real-time patient compliance automation and prevention of protocol deviations in clinical trials.

Flaskdata provides automated detection and response to protocol adherence issues. This has significant implications in terms of the study timelines and budget - by catching issues early and allowing for immediate corrective action, the sponsor and CRO keep the study on track and minimize DM queries. The Flaskdata platform provides an immediate picture of compliance posture of a study at any level of granularity of time, subject or site.

"FlaskData is a novel and important tool for reinforcing patient adherence in clinical trials," said Gabriel Beridze, CEO of Prometheus Bio-medical CRO, Tbilisi, Georgia. "We're delighted to see the Flaskdata team have the opportunity to develop and distribute their technology in the EU."

The Flaskdata.io platform currently supports studies at over 350 investigational sites in Europe, United States and Israel. Flaskdata.io works with life science sponsors and CROs to design, implement and operate patient-centric clinical trials. The Flaskdata.io platform integrates continuous data feeds from patients, investigators and connected devices with automated detection and response to protocol violations in real-time.

Additionally, the Flaskdata.io "Powered by Flask" program is providing digital therapeutics, digital health and medtech developers with free and open access to the Flask API and reduces their time to market for HIPAA and GDPR-compliant patient management solutions.
