

Water Damage Cleanup Job Started by Bio Clean of Utah in Woods Cross

December 11, 2019

December 11, 2019 - PRESSADVANTAGE -

Bio Clean of Utah, based in Centerville, Utah, has announced that they have recently started a water damage cleanup job in a commercial building in Woods Cross, Utah. The cause of the problem was that a toilet in the building had started leaking without anyone noticing it. The water had leaked through the walls and into two other restrooms, four offices, two hallways, and the lobby. Furthermore, mold from a past water damage event was also discovered and has to be removed. The total cost of the water damage cleanup project is \$15,000.

Daryl Olsen, president of Bio Clean of Utah, says, "In this water damage cleanup Woods Cross Utah project, you can see why it is important to act promptly if there is a water leak. This can cause water to get into various parts of a home or building. For a commercial building, it has a lot of other places to go, which means the extent of the damage that water can do is much greater. As you can see, there was a previous water damage event, which has led to mold growth. A water leak may start small but it can keep on growing and as it grows, the expenses for water damage cleanup will also rise."

Immediate steps need to be taken once a water leak has been detected because the longer the parts of a

building, including furniture, remain wet, the greater the damage will be. Steps must be taken as soon as possible to get rid of the water and start the drying process. It should be noted that a water damage event can take weeks to dry on their own. Meanwhile, mold can start to grow in as little as 48 hours, and mold will be able to double its population every few hours. With regards to insurance, it is important to get the approval of the insurance company before pursuing any emergency measures to minimize the damage.

Bio Clean of Utah has the appropriate equipment and tools for water removal and for determining if there is still excess moisture after a cleanup. They have powerful truck mounted and portable water extraction units. They also have hygrometers, moisture detectors, and other meters to accurately measure moisture saturation.

Meanwhile, they employ a dehumidification process that minimizes the cost of restoration and replacement, including the cost of down time for the business. They also have the tools and capability to get rid of water and moisture from plaster, drywall, cement floors, interior paint, insulation, and carpets. They use state-of-the-art drying equipment that can reduce humidity levels, thus preventing the warping and swelling of floors, furniture, and walls.

They will also control the odor from mold and other microorganisms attracted by moisture. They can use germicides sanitizing agents and anti-microbial treatments to prevent the growth of fungi, bacteria, mildew, and other harmful microorganisms.

Meanwhile, Bio Clean of Utah does not only provide water damage cleanup. They have a wide range of services that include blood and crime scene cleanup; air duct cleaning; fire and smoke damage cleanup; mold testing; mold inspection; and mold removal. Air duct cleaning is essential because over time, the air ducts can accumulate a lot of dirt, dust, pollen, debris, hair, dander, and more. Homeowners may find that house cleaning has become a challenge because the house can easily become dusty and dirty again even after they have just cleaned. This is because the dust, dirt and other things in the air ducts will get circulated with the air. Furthermore, these can affect the efficiency of the heating and cooling system. Also, some family members can be sensitive to dust and other air contaminants. Those with allergies and asthma tend to be affected the most.

Those who are interested in the water damage cleanup services of Bio Clean of Utah can go to their website, or contact them on the telephone or through email. They provide their services to a number of places in Utah, such as Ogden, Layton, Centerville, Park City, Salt Lake City, Provo, Tooele, Sandy, and Roy.
