

Cosmetic & Pediatric Dentist In Ontario CA Offers Free X-Rays and Dental Exams

December 09, 2019

December 09, 2019 - PRESSADVANTAGE -

Pacific Dental Smiles Ontario, based in Ontario, California, has announced that they are offering free x-rays and dental exams to all new patients. New patients have been benefiting from this special offer and have been redeeming their free service by simply mentioning this online special. So far, the most popular services that have been requested from Pacific Dental Smiles Ontario involve pediatric dentistry, cosmetic dentistry, and specialty dentistry services, such as braces and Invisalign that belong to the orthodontics category. Dr. Michael Danial had recently opened this dental office in Ontario, California, but he has already been practicing dentistry since 2000.

The dental office provides Pacific Dental Smiles orthodontic services, which are part of the specialty solutions that they offer. Dr. Michael Danial explains, "Our orthodontic solutions range from conventional braces and tooth-colored veneers to clear brackets and Invisalign. We only use high-quality materials, such as ceramic and porcelain, to ensure beautiful, long-lasting results. All our orthodontics are expertly designed to align, repair, correct, and enhance your smile!?"

As part of their specialty services, they also offer oral surgery services. These include dental implants,

wisdom teeth extractions, and bone grafts. Dental implants provide long-lasting tooth loss solutions that are more affordable, more reliable, and less time-consuming. Meanwhile, wisdom teeth may cause impaction, swelling, and pain. The dental office's orthodontists can take care of the removal of wisdom teeth. And finally, they can offer bone grafting to repair complex bone fractures by replacing missing bone. This is an important procedure for those with bones that are unable to support dental implants. People who are considering dental implants are advised to consult with the dental office's orthodontists to determine if they need this pre-implant placement operation.

Meanwhile, they also offer pediatric dentistry services, which means every child patient will get a fun and gentle dental care service. The kid's dentist has developed a reputation of being trusted by thousands of parents in Ontario to take care of their kids' dental needs. They offer specialized pediatric dentistry services to infants, children and teenagers, all within a comfortable setting.

The Pacific Dental Smiles pediatric dentistry services offered are comprehensive. They include teeth cleaning, low-radiation digital x-rays, preventive sealants, natural fillings, cosmetic dentistry, mouth guards and sports guards, emergency services, and preventive care.

Pediatric teeth cleaning services can prevent cavities and keep the gums of kids healthy. The digital x-rays offer a clear look into the state of a child's teeth while ensuring that they are exposed only to minimal radiation. As one of the ways to prevent tooth decay, they can also apply preventive sealants on the surface of a child's teeth to seal off fissures and grooves. They also provide high quality tooth-colored fillings for repairing cavities and damaged teeth. Cosmetic dentistry services are available to children, such as Invisalign braces and other cosmetic treatments. Parents can also bring their children here for sports guards or mouth guards, to protect the teeth of children while playing sports or as part of the treatment for conditions like teeth grinding.

Meanwhile, for adult cosmetic dentistry services, they offer various ways to enhance a patient's smile. They can provide veneers, dental implants, Invisalign, Porcelain/ Zirconia crowns, teeth whitening, and tooth-colored fillings. Veneers are used to straighten misaligned teeth, get rid of teeth stains, and close gaps. Not only will these improve the patient's smile but they will also protect the surface of the teeth.

Invisalign braces are also offered. which are computer-designed, transparent, plastic aligners that offer a metal-free alternative to the conventional braces. Porcelain/ Zirconia crowns are some of the best crowns available in the market. They are translucent and have an appearance similar to tooth enamel. Tooth-colored fillings are the latest cosmetic material for long-lasting dental fillings.

Those who are interested in the dental care services offered, including the Pacific Dental Smiles cosmetic dentistry services, can visit their website or contact them on the phone or through email.
