

## **Alpha Therapeutics Wholesale CBD Products for Physicians Are Triplicate Tested**

*December 10, 2019*

December 10, 2019 - PRESSADVANTAGE -

Alpha Therapeutics LLC, based in Pahoenix, Arizona, has revealed that their wholesale CBD products for physicians are triplicate tested and meet the highest standards. The company is a pharmaceutical cannabidiol (CBD) manufacturer and distributor of innovative CBD products. To ensure the quality of their products, these are triplicate tested for assurance of product consistency and quality. Their packaging is provided with unique QR codes that allow physicians to trace actual batch results. They also guarantee that only organic and fair trade raw materials that are non-GMO where available are used in the manufacture of the CBD products.

Geoff Dada, CEO of Alpha Therapeutics LLC, says, "One of our most crucial cornerstones is our commitment to product quality. We know that communication between the manufacturer, physician or healthcare professional, and the patient regarding any prescribed product is essential to a timely recovery. We're committed to providing any and all details physicians and other healthcare professionals need to provide their patients with the best CBD treatment possible."

CBD oil for medical purposes are obtained from the cannabis plant called hemp. This is not the same as the

marijuana that farmers are selectively breeding for the purpose of increasing the amount of tetrahydrocannabinol or THC, which is the psychoactive chemical that causes the "high" sought by those who use marijuana for recreational purposes.

Alpha Therapeutics is also one of the private label CBD manufacturers in Phoenix, Arizona, having the experience and the knowledge necessary for offering a range of high quality products directly or as a white label CBD manufacturer. They are ready to work with their clients to make sure that the new formula will comply with the required product development. An important advantage offered by Alpha Therapeutics is that the development cycle will not need to last for several months or years from concept to prototype. This is because they have the expertise and knowledge for developing complex formulations for many CBD products, including those in the beauty products industry.

Through their CBD manufacturing facility, they ensure that the customer formulation process includes true labeling, quality assurance, potency guarantee, consultant's advice, rapid development, research and development, and creative design. Rigorous inspection, certified laboratories, testing, and oversight of the manufacturing plants' growth standards are of key importance to Alpha Therapeutics and its clients. This is because the entry of just a few harmful substances into the watering, fertilization, and pest control processes can significantly jeopardize the quality of the CBD products. While the CBD oil comes from hemp plants, taking care properly of these plants before they reach the manufacturing facility is critical.

Meanwhile, research into the therapeutic use of CBD are being conducted. It was only recently that the FDA had approved the prescription use of CBD oil for the treatment of two kinds of epilepsy. Several kinds of cannabinoids can be found in the cannabis plant. These are able to create their effect on the body by attaching to receptors, which are the CB1 and CB2 receptors.

CB1 receptors have been found to be related to how the brain controls certain functions, such as coordination, movement, emotions, mood, memories, pain, thinking, and appetite. CB2 receptors appear to have an impact on the immune system, pain, and inflammation. However, studies have shown that CBD does not attach itself to either CB1 or CB2 receptors. Instead, it seems that CBD causes the body to use more of the cannabinoids that it actually produces.

Studies on the therapeutic effects of CBD are focused on the treatment of many complications of epilepsy, such as neuronal injury, neurodegeneration, and psychiatric diseases. Research is also being conducted on the effect of CBD on anxiety disorders, cancer, acne, type 1 diabetes, and Alzheimer's disease. Thus, there is great potential for CBD products and many manufacturers are interested in entering the industry. Possible CBD products include CBD terpenes, CBD tinctures, CBD vape cartridges, CBD salve, CBD e-liquids, CBD capsules, CBD lotions and cosmetics, CBD for pets, and white label CBD products.

People who need more information about wholesale CBD oil manufacturing from Alpha Therapeutics can check out their website, contact them on the telephone or through email.
