

Cosmetic Dentist in Lake Elsinore Dentistry Uses Advanced CEREC Milling Machines for Same-Day Veneers, Crowns and Bridges

December 16, 2019

December 16, 2019 -

Lakefront Family Dentistry, based in Lake Elsinore, California, is able to provide patients with same-day veneers, crowns, and bridges with the use of their two most advanced CEREC milling machines in their office, which also has an in-house lab. To ensure patients get what they need the same day, instead of waiting weeks, both dentists utilize the advantages of zirconium dioxide, which are Dentsply Sirona Zirconia blocks for implant prosthetics. This quality-grade material has high flexural strength with no risk of chipping.

Lisa Harrison, Patient Coordinator at Lakefront Family Dentistry, says, "Out of the 200,000 dentists in the US, only 10 percent own the advanced CEREC system. Dr. Derek B. Hauser, DDS, a highly qualified CEREC Dentist has over 15 years of experience transforming smiles using this amazing system. Patients get new, permanent crowns, veneers and bridges during the same visit. You can now save precious time with your friends and family, because you don't have to wait weeks to get a smile you will absolutely love." Dr. Matthew Kanter, DDS, uses the in-house CEREC milling machines to make beautiful smile transformations with this cosmetic dentistry technology while you wait in their comfortable A-dec chairs.

CEREC stands for Chairside Economical Restoration of Esthetic Ceramics and is a unique software used by qualified dental practitioners to produce high quality, ceramic restorative dental crowns by applying 3D computer-assisted design (CAD) software in combination with a computer-assisted milling (CAM) device. The benefit is that custom-fit dental crowns can be produced within a matter of minutes.

Without the CEREC system, patients need to make several visits to the dentist. The reason is that the dental products would need to be made offsite using a plaster model impression of the patient's mouth, and this requires several fittings before the dental crown can be permanently bonded. Utilizing the advanced CEREC system, instead of the outdated plaster model impression, a high-resolution 3D imaging camera and CAD

software is used. The CAM device is then used to fabricate precise fitting CEREC crowns from a block of high quality ceramic that matches the color of the patient's natural teeth.

Aside from dental crowns, Lakefront Family Dentistry also provides porcelain veneers. Thin but durable porcelain material is used for creating the flawless porcelain veneers they offer patients. These are designed to look and function just like your natural tooth color to match the patient's adjacent teeth. Veneers can be used for fixing various problems, such as chipped or broken teeth, stained and/or discolored teeth, improperly shaped teeth, and crooked teeth with large gaps. It has the same result as making dental crowns while you wait--CEREC technology is used to produce custom-fit veneers in minutes.

Meanwhile, Lakefront Family Dentistry also offers dental bridges. A dental bridge is used to "bridge the gap" for one or more missing teeth. Exactly like with the dental crowns and veneers, patients get to leave the dental office the same day with a permanent solution for their teeth.

Lakefront Family Dentistry provides additional services. These include: same-day porcelain crowns and veneers; titanium dental implants; white tooth fillings; root canals; periodontal disease treatment; gum disease treatment; teeth whitening; and professional teeth cleaning for preventive oral health care. The dentists also provide a partial denture that is manufactured from porcelain and permanently fixed in the mouth, with the help of CEREC technology.

At Lakefront Family Dentistry, Dr. Derek B. Hauser, DDS, and Dr. Matthew R. Kanter, DDS, offer the best cosmetic dentistry in Lake Elsinore. Whether patients desire a new smile transformation with same-day crowns, veneers or bridges, the doctors and their two Registered Dental Assistants in Extended Function II are top-notch with patient care. Their entire staff stays on top of the latest dental technology, and the office uses only the best equipment for patient safety, which includes Solea laser dentistry and the Orthophos SL Sirona Panoramic digital x-ray machine. Patients who normally have dental anxiety now enjoy coming to the dentist because of their gentle therapy dog named Stella.

New patients interested in the latest cosmetic dentistry and oral health transformations, including Invisalign, which is an alternative to the traditional braces, may visit the Lakefront Family Dentistry website, contact them via phone or through email.
