

New Website Now Connects Homeowners With Local HVAC Contractors

January 03, 2020

January 03, 2020 - PRESSADVANTAGE -

Louisville, Kentucky based My Trusted Contractor is pleased to announce the launch of their new website that connects homeowners to a number of top rated HVAC companies in Louisville and the surrounding areas. The new site is designed to offer online users quick and easy access to a comprehensive directory of the most trusted and established heating and cooling system contractors in the greater Kentucky area.

The newly launched website was developed by Plumbers Supply Co, a locally owned plumbing company with almost 100 years of industry experience, with the goal being to recommend some of the most trusted and reliable contractors that they have worked with over the years. In the pursuit of this goal, Plumbers Supply Co came up with the idea to create an online platform where homeowners can identify the top contractors in the area based on certifications, customer service, professionalism, and industry qualifications.

Scott Ritchey, a company representative, says, "We vet all of our contractors to guarantee our customers receive the most professional and qualified service available. Each of our certified contractors must carry current industry licenses, pass extensive training courses, and routinely complete ongoing courses." He points out that the HVAC contractors listed on the site are also vetted to ensure excellent workmanship and high quality service. In addition, all of the companies listed are fully insured and licensed to provide a full range of HVAC related services, including system repairs, new system installation, routine maintenance, and more.

Ritchey explains that each HVAC contractor is required to present a Master HVAC Contractor License, which can only be acquired after completing extensive training to become a Journeyman HVAC Mechanic, followed by at least two years of general supervision under a master HVAC Contractor. The company strictly observes and reinforces EPA Section 608 Type III as well, which requires all technicians with access to a system or container that could potentially release ozone-depleting refrigerants into the atmosphere to hold a Section 608 Technician Certification. All contractors are required to have Type III certification, permitting them to

service and dispose of low-pressure appliances. Finally, they require HVAC companies to have A/C Technical Training | HVACCEC-10266, Furnace Training | HVACCEC-10265 and Heat Pump Training | HVACCEC-10268.

Meanwhile, plumbing contractors who are invited to join the website's ranks must hold a Master Plumber Contractor License awarded by the state. To obtain the license, plumbers must show a significant number of years of work experience, including time working under a Master Plumber. Additionally, plumbing contractors must complete at least six hours of continuing education and training each year to ensure that their methods and equipment are up to date.

Homeowners looking for a professional and trusted HVAC and plumbing contractor may visit <https://www.mytrustedcontractor.com/> to get started. The website offers simple search methods, including grouping contractors by city and state, and an interactive map that helps users filter contractors based on their location. Visitors to the website simply need to input their location and browse from exclusive list of expert companies to find the perfect contractor for the job they want carried out.

My Trusted Contractor also ensures that all of their partner companies maintain their licenses and all other industry requirements. By working with the contractors at My Trusted Contractor, homes and businesses are fully insured and protected by some of the best warranties in the market. Notably, My Trusted Contractor points out that, in order to better serve their customers, every company they include on their online directory is handpicked and added by invitation only.

On the other hand, Plumbers Supply Co advises homeowners to choose York, an award-winning manufacturer of American-made HVAC systems, due to their unparalleled dedication to providing energy efficient and state-of-the-art HVAC systems. They also state that York products are backed by some of the best limited warranties in the business. Given that these warranties lead the industry in covering parts and key mechanical components, customers can rest assured knowing they've made the best decision for their homes and businesses.

Complete details can be found on the newly launched website. Alternatively, interested parties may connect with My Trusted Contractor through their official social media pages to stay up to date with their latest news and important announcements.
