

Ontario Hearing Centers Shares Information On Hearing Aids

December 30, 2019

December 30, 2019 - PRESSADVANTAGE -

Ontario Hearing Centers, based in Rochester, New York, has reached out to the community in order to share useful information on the various types of hearing aids available at their facility. The local center works alongside many brands of hearing aid suppliers to support the community, offering different options to fit their needs.

While there are a broad variety of options when it comes to hearing aids, Ontario Hearing Centers states that their patients will be choosing from five major manufacturers most of the time, as their products offer the biggest guarantee of quality and durability. Each of these companies manufactures hearing aids that have their own prescription to fit a specific type of hearing loss and a particular lifestyle, with some situations offering more flexibility than others.

One of the most popular brands of hearing aids, known for their high quality and reliability, is Oticon Opn, a device that claims to be the first hearing aid proven to work in harmony with the brain, helping its user hear better with less effort. This device offers support for Tinnitus patients, helping them manage their symptoms and offering a variety of relief sounds that can be customized according to the user's preference. Oticon's

device also allows the user to connect directly to their smartphone, where they can install an app that can be used to connect with the TV or any other smart device and listen to its sound directly through their hearing instrument. It comes in eight different elegant and discreet colors, either blending with the user's skin tone or accentuating with their color of choice.

Another of the most widely known brands of hearing aids is ReSound LiNX 3D, a device that promises to help their users better identify speech in noise as well as hear and distinguish more sounds around them. This device offers surround sound capabilities of the finest quality, with 360° coverage. It can also be connected directly with the user's phone, streaming sound directly to their hearing aid for more comfort. Furthermore, the ReSound LiNX 3D device allows its user to adjust its settings without having to visit a doctor.

For patients with more demanding hearing needs (who may need further customization than any other device offers), the Starkey hearing aid is one of the better options, allowing new users to transition into its use gradually until they are ready for a complete shift. This is a rechargeable device with built in Acuity Directionality that is designed to improve speech audibility in difficult listening situations, along with Speech Shift to ensure that the user does not miss any critical information.

The Starky device comes with one of the best wireless streaming technologies that allow consistent streaming from cell phones, TVs, or other sources through any of their accessories. This device offers a complete set of customizable features, integrating Advanced Multiflex Tinnitus Technology into the hearing aids to bring relief for those who suffer from ringing in the ears. This is one of the most durable and dependable hearing aid solutions.

Last but not least is Widex, which offers an innovative device that provides exceptional 2.4GHz direct connectivity to the user's iPhone, offering the best sound quality available. This device utilizes a customizable app that allows the user to stay connected at all times and control their listening with an easy to connect, intuitive application that provides unparalleled connectivity between the user's iPhone and their hearing aid.

Aside from its outstanding connectivity, this app also allows the user to customize and adjust various sound settings and listening programs to suit their individual preferences. The result is an experience that patients describe as superior to other options, with the most crystal clear and true-to-life streamed sound of any hearing aid available on the market.

Ontario Hearing Centers? website includes more information on the different hearing devices supported and sold at their facility. Their location can be found here: <https://www.google.com/maps?cid=9213821493223506062>. Interested parties may reach out to John

McNamara of Ontario Hearing Centers to follow up on any further inquiries as well.
