

TinyFrog Technologies Announces New WooCommerce Maintenance Service

December 19, 2019

December 19, 2019 - PRESSADVANTAGE -

TinyFrog Technologies, a San-Diego web design & development agency, announced today that it has launched its new service, WooCommerce maintenance. The monthly service is specifically tailored to WordPress websites that are running on the e-commerce platform WooCommerce.

WooCommerce is one of the most popular e-commerce platforms in the world. The open source platform integrates seamlessly into any WordPress website and offers the same level of customization and flexibility as the popular content management system WordPress.

However, WooCommerce sites are prone to security and development issues if the site is not properly maintained. TinyFrog Technologies has been offering WordPress maintenance and secure hosting services since 2012. After supporting WooCommerce sites for many years, TinyFrog finally decided to launch a specialized program for these sites.

“WooCommerce sites have very specific needs when it comes to hosting, security & maintenance,” said Chris Andujar, hosting manager at TinyFrog Technologies. “By taking care of those needs, our team can

help WooCommerce site owners get better results from their online stores.?

As part of its WooCommerce maintenance service, TinyFrog?s development team manually updates the plugins, themes and core once a month for the website. For WooCommerce sites, plugin compatibility issues are very common and a skilled PHP developer can manage these quickly during the monthly updates. When you compare WooCommerce versus Shopify, another e-commerce platform, WooCommerce sites may require extra care, but there are additional benefits in terms of flexibility and customization.

The monthly service also includes 24/7 security monitoring, daily backups, performance monitoring and secure hosting. Clients receive support from TinyFrog?s expert WordPress development team. As an insurance policy for the site, the TinyFrog team will take responsibility and restore a website if it goes down for any reason, including due to the client?s own error.

?We?ve been working with WooCommerce for 10 years and our entire team has deep knowledge of the WordPress ecosystem, so we?re very comfortable in managing complex WooCommerce sites,? said Mikel Bruce, TinyFrog CEO.

In addition to WordPress and WooCommerce maintenance, TinyFrog specializes in B2B website design and development. Its team focuses on a conversion-based approach to web design and has built well over 1,000 websites since 2003.
