

Patients With Carotid Endarterectomies No Longer Need To Be Embarrassed By A Large Scar

August 10, 2015

August 10, 2015 - PRESSADVANTAGE -

Valencia, California: Passionate Care LLC addresses scar concerns of patients who undergo carotid endarterectomies. These patients historically have had to suffer the questioning gazes of onlookers who stare at their large neck scars. The scars come from an incision traditionally performed by a vascular surgeon who is repairing a blockage or stenosis of the carotid artery.

"The carotid incision is different than most incisions because it is so visible," stated Raul Meza, an intensive care nurse. "This seems to be one of the most common concerns voiced to me as I do discharge education.

If you have an appendectomy the issue of the scar is not so bad because it's small and is in an area that is usually covered up. But when it is large and it's on your neck, then not only are you staring at it every time you look in the mirror but so is everybody else. This can be unsettling for a lot of patients."

Passionate Care LLC has taken extensive strides to address this issue by formulating a scar remover that takes into account the sensitivity of the neck. "The area of the neck as well as any area along the face usually is more sensitive than other parts of the body and benefit greatly from extra ingredients that will optimize the healing process," stated a Passionate Care representative. "Most scar gels in the market today

do not take this into account. They proceed as if a scar, is a scar, is scar. But the truth is that it's not. That is why we have proceeded with the extra step of including Vitamin C serum into our formula.?

The benefits of Vitamin C serum has been touted by many doctors and celebrity doctors alike. It is a staple for the skin care needs of many well-known personalities. This missing ingredient will also help the area surrounding a neck or facial incision and not just the incision itself.

?Feeling good about yourself is very important and helps with your overall healing process. It's great that your surgery is a success and is usually the most important thing. But if you can also like the way you look after the surgery then it's a whopping success. You need to smile and mean it, anything less than that then you have short changed yourself,? stated Meza.

Passionate Care always recommend following your doctor's orders when it comes to wound care or any post-op care.
