## **Cub Roofing Offers Residential Metal Roofing Systems in London Ontario**

*January 03, 2020*

January 03, 2020 - PRESSADVANTAGE -

Cub Roofing, based in London, Ontario, Canada, has announced that they are offering various kinds of residential metal roofing services in London, Ontario. They offer metal roof replacement, metal roof repair, metal roof snowguards, and more. They also offer a wide range of metal roofing materials, such as steel, aluminum, copper, corrugated roofing, and standing seam metal roofs. Cub Roofing has more than 10 years of experience in metal roofing and have already installed more than hundreds of roofs for both residential and commercial customers in the area.

Bella Reynolds, spokesperson for Cub Roofing, explains, "After every hailstorm or extreme weather, your roof has suffered massive damages. With a complete roofing inspection, we determine the root cause of your roof damages and quickly resolve it. We provide top-quality and immediate roofing repairs. In addition, we can fully tear off and replace your dilapidated roof or restore it to its full functionality to help you save time and money. If you're building a new property in London ON, we're the team that guarantees top-quality roofing installations without fuss, improves its lifespan, and guarantees longevity."

Cub Roofing offers metal roof replacement services, particularly for homes with old roofs that are showing

signs that they need to be replaced. These signs include the presence of moss, roofs that are more than 30 years old, and damaged flashing. Moss is a sign that the roofing material has started to rot. This is often encountered for roofs made of wood shakes, clay tiles, asphalt shingles, and slate tiles. It may be true that the roof material will still have a number of years even with moss growth. However, the moss are extracting the nutrients from the roofing material, which makes them brittle and weak.

Meanwhile, studies have found that roofing materials are at their best performance within 15 to 20 years after their installation or replacement. Unfortunately, when they are more than 25 years old, they start to deteriorate. For roofs that are more than 30 years, a significant storm can totally damage the roof.

Missing or loose flashing around the vents, chimneys, skylights, and other rooftop structures are an indication that the roof has suffered severe damages after a storm. They indicate that some of the material has been loosened or pulled away from their foundation and there is a need for a professional inspection to prevent further damage to the roof.

Meanwhile, metal roofs can provide better protection for the home or property. Once it has been properly installed, it will require minimal maintenance and it has a much longer lifespan compared to other roofing materials. Nevertheless, metal roofs may still deteriorate over time, becoming brittle. This is due to repeated contraction and expansion because of temperature changes. That is why Cub Roofing Services include metal roof repair.

Cub Roofing has decades of experience in handling metal roofing installations, replacements, and repairs. And they have experience in various kinds of metal roofing. These include steel, aluminum, and copper. Steel is often a good choice as metal roofing material because it is strong enough to resist hailstones and the wind. Modern steel roofs are also provided with aluminum or zinc coatings that further enhance their durability and lifespan. And with professional installation, a steel roof can provide protection for the home for decades.

Aluminum is another good choice as metal roof material. It has the advantage of being lightweight and resistant to corrosion. An aluminum roof can last longer than a century with minimal maintenance. Furthermore, it can be installed more quickly compared to steel and copper roofs because of its lighter weight. The only possible problem is that it can sustain cracks or dents due to expansion and contraction if it has not been properly installed.

Meanwhile, copper roofs are as durable as aluminum roofs. The difference is that they are more expensive but most homeowners love the way copper can be used as accent material on their roofs. Unfortunately, skilled roofers are needed for its proper installation.

People who are interested in residential metal roofing systems London homeowners can trust can check out the website of Cub Roofing or contact them on the telephone or via email. They are open 24 hours, from Monday to Sunday.
