

# La Bella Vita Medi Spa Offers Neo Graft Hair Restoration for Men and Women

*January 07, 2020*

January 07, 2020 - PRESSADVANTAGE -

La Bella Vita Medi Spa, based in Rocklin, California, has announced that they are having great results with the NeoGraft® Hair Transplant System. Physician and Spa owner, Dr. Turnure told us that he did a lot of research prior to purchasing the Neograft® Hair Transplant System. He decided to offer the Follicular Unit Extraction (FUE) technique because it is less invasive, less painful and has no linear scar. Now men and women who undergo a transplant can wear their hair short in the back without having an embarrassing scar. The FUE technique for hair transplantation extracts individual hair follicles (which do grow back) from the back or side of the head in groupings. Each grouping can have one to four hairs which are then transplanted to the areas of the scalp where there is balding. Learn more about this at <https://labellavitamedispa.com/project/neografthair-restoration-men/>.

Came Turnure, Spa Director at La Bella Vita Medi Spa, explains, "The NeoGraft® system is the first and only FDA cleared follicular unit harvesting and implantation system of its kind. The NeoGraft® system delivers automation of the FUE technique, the most advanced technique in the hair transplant industry. This revolutionary system uses pneumatic controls to precisely extract complete individual hair follicles which can be immediately transplanted to the selected areas of the scalp. The NeoGraft® automated hair transplantation system is the only complete harvesting system on the market with a "No Touch" implantation technology, yet there are still human hands doing the procedure (not a robot)."

There are a number of reasons why the NeoGraft® procedure is recommended as the solution for men and women with thinning hair. It is the least invasive procedure for hair transplantation; no need for stitches or staples; patients feel little discomfort; flexibility for any hairstyle, whether short or long; no unsightly linear scar; less restrictions on the patient's normal daily activities; shorter recovery time with patients being able to return to work in a few weeks and getting natural looking results.

The NeoGraft® advanced technique provides a discrete solution for hair loss, allowing both men and women

to benefit from natural looking results with minimal downtime, no linear scar, and shorter recovery period. Hair restoration through the NeoGraft® procedure is unnoticeable, which means that it's the patient's secret and other people will not know unless the patient reveals his or her secret. More about this can be learned from <https://www.labellavitamedispa.com/neograft-hair-restoration-for-men/>.

There are a number of advantages of the FUE technique. These include the fact that it is a minimally invasive, very safe, and a relatively minor procedure; minimal bleeding and less complications compared to the "strip" method; the fact that performance of the procedure is with local anesthetic and no intramuscular or intravenous sedation is needed; and the fact that patients experience no sutures, no scalpel incision, no linear scar, minimal discomfort, and shorter recovery time.

Aside from the hair restoration services, La Bella Vita Medi Spa also offers a number of other services. These include aesthetician services, cosmetic injectables, laser treatments, and fat reduction and tightening.

Aesthetician services include facials, makeup application, HydraFacial MD®, and waxing. Cosmetic injectables include Bellafill®, Botox® Cosmetic, and the Juvéderm® family of fillers such as Voluma® XC, Volbella® XC, Vollure® XC and Juvéderm® Ultra/Ultra Plus. They also offer the Kybella® injection for the reduction of fat underneath the chin. Laser treatments include Intense Pulse Light / Photofacials; Laser Hair Removal; Laser Resurfacing Treatment (Co2) & Tattoo Removal; and Sublative Laser Treatments. Fat reduction & tightening treatments include CoolSculpting®, Medical Weight Loss & Nutrition, Profound® Microneedling RF, and Venus Freeze Plus®.

HydraFacial MD® is a state of the art medical device that simultaneously performs cleansing, extraction, hydration, exfoliation, and antioxidant protection for the facial skin. It is a non-irritating and non-invasive treatment for improving the appearance of wrinkles, fine lines, oily or acne-prone skin, congested and enlarged pores, hyper-pigmentation, and brown spots.

Bellafill® is an injectable 5 year filler that is used to treat certain kinds of acne scars and the nasolabial folds around the mouth and other areas of the face. It rebuilds collagen and can provide instant smoothness right after the patient leaves the office.

Those who want to learn more about the NeoGraft® Automated Hair Transplantation system offered by La Bella Vita Medi Spa can check out the NeoGraft website at [neograft.com](http://neograft.com), or contact La Bella Vita Medi Spa on the telephone or via email.
