

With The Right Design, Green House Plans Can Now Be Affordable

August 18, 2015

August 18, 2015 - PRESSADVANTAGE -

Green house plans, which are environmentally friendly but have gained a reputation over the years of being expensive, can now be affordable. Many homeowners forgo having a "green" home simply because they feel that the designs alone would be more than they could afford. They view these designs as much too expensive and exotic for their budgets. Recent reports, however, show that designing a home to be both economically and environmentally friendly is now possible. There are a number of options with regards to home designs, many of which help to create homes that are energy efficient and offer a host of other "green" benefits as well.

Stan Stauffer of Larry's Home Designs in Stevens, Pennsylvania, recently commented about green house plans and how they can be an affordable option for homeowners. He said, "There are actually quite a few things that can be done by an experienced designer to incorporate improved energy efficiency into a desirable floor plan without going extreme with costs or style tastes that stray outside what is typically considered standard."

These homes allow homeowners to save energy, which helps their budget as much as it does the

environment. "Going green" is a concept that has gained much popularity over the years, as more and more environmental groups are touting the benefits of saving energy for future generations. In addition, plans designed to conserve energy also benefit homeowners in other ways.

"The thing with 'green house plans' is that they continue giving a return on investment for many years to come. One other interesting tidbit of information is that foreclosure rates on energy-efficient homes are much lower than the national standard," says Stan Stauffer. Larry's Home Designs offers a number of green design options, as can be seen at <http://www.larrys-house-plans-guide.com/green-house-plans.html>.

Homeowners now have better and more affordable options when it comes to designing a home that helps them to save money while helping to preserve the environment for future generations.
