

Construction Industry Sees Increase In Demand For Pole Barn House Plans

August 14, 2015

August 14, 2015 - PRESSADVANTAGE -

The demand for pole barn house plans has grown substantially over the past few years. As homeowners realize the cost efficiency of these homes, design companies are beginning to see an increase in the number of pole barn plans that they turn out.

Stan Stauffer of Larry's Home Designs in Stevens, Pennsylvania, states, "Pole barn house plans are much more versatile and less design restrictive than the name might indicate. They are less expensive than a traditionally built home. However, in no sense of their name do they need to look anything like a barn. Consumers are really beginning to come around to their look and their lower cost. When it comes to visual appeal, a pole barn house can look as modern, rustic, or traditional as the homeowner prefers."

The cost savings result from the methodology of this building style's foundation, which eliminates the basement and foundation walls. Even though "poles" can be useful and practical in the structure of the main house, they are not required above floor level. This provides the general opportunity for having as "normal" a home as desired.

Pole barn designs are easier and much less expensive with regards to construction. Pole barn houses use posts as framing members, which give them added strength due to the posts being buried up to six feet into the ground. This also helps to lower costs associated with foundation, when compared to homes with basements.

Larry's Home Designs provides custom designs for homes of all types, and these include pole barn houses, as can be seen at <http://www.larrys-house-plans-guide.com/pole-barn-house-plans.html>.

Larry's Home Designs has more than 15 years of experience in custom home planning. Their continued education and attention to detail have resulted in nearly 100 percent of all their building permits being approved the first time.

"We offer professional, family friendly, and flexible services, which help us to ensure that our clients are always completely satisfied," says Stan Stauffer. "Our double accuracy guarantee means that any design changes required by your builder after construction begins, due to design error, or plan changes that are necessary for permit approval are free."
