University Headquarters Just Released Rankings for the Top 55 Best ROI Colleges

January 30, 2020

January 30, 2020 -
University Headquarters a college information website that informs prospective and current students about various degree programs and schools that may meet their needs, has compiled a ranking of the 55 Best Colleges Based on the ROI (Return on Investment).

To develop this list, University Headquarters took an exhaustive look at the varying factors that might affect the ROI of a degree from any specific university. These factors include the average net price to obtain a college degree from the institution, what the average graduate?s salary was, and others.

Following is a list of the University HQ best ROI top 10 colleges for college students and their families ? potential students might find some of the list surprising: United States Naval Academy, United States Air Force Academy, Massachusetts Institute of Technology, Albany College of Pharmacy and Health Sciences, United States Military Academy, California Institute of Technology, Stanford University, Harvey Mudd College, Carnegie Mellon University and Princeton University.

Each student will have their own criteria as to what makes a university or college valuable for them. For

some, knowing they have the opportunity to serve in our country?s armed forces is the most valuable factor. For other students, the graduation percentage of each institute is the most vital consideration.

As students and parents research each university or college they are considering, costs are sure to factor into their final decision. Because of the expense of a college education, wanting to know about the likely success of their investment in any institution they are considering is a reasonable next question.

Some factors may include whether a university provides on-campus housing or not, the potential financial aid for which the student may qualify, and the final four-year cost. For some institutions, there is no cost to the families, such as when students choose to earn their degrees from a military academy. For others, the cost of tuition and related fees adds greatly to the accumulated cost that families and students pay.

Some of the universities on this list are well-known and are much more expensive than state universities. However, the retun on investment can be significantly higher from an institution whose name is well known, especially from specific regions of the country. Potential annual income factors into the ROI of each school just as where college and university graduates choose to work factors into their annual income.

Some families and their students may not worry about the eventual ROI of the schools they choose, but it?s something that is worth it for any student to consider, whether they are just leaving high school or are professionals looking to accelerate their career. Given that they are likely to need student loans, having this piece of information may help them as they look at how those loans will affect the overall worth of their new degree. Even if their chosen major is projected to be in high demand, an unexpected recession may change this due to the falling demand and lack of employment. Knowing the projected ROI for their school, students will have another data point to work off of when making one of the biggest, and most expensive, decisions of their lives.
