

# Fig Tree Capital Ventures Announces Record Breaking Well For Those Investing In Oil

*August 18, 2015*

August 18, 2015 - PRESSADVANTAGE -

Fig Tree Capital Ventures, an oil and gas investment firm in Texas, has announced a newly completed well with record setting initial production for FIG and Whiting Petroleum, as shown on <http://www.figtreecapitalventures.com>. The well is in the Skunk Creek development currently operated by Whiting Petroleum Corporation (WLL) in the South Fork Field of Northern Dunn County North Dakota. It reached an initial 24 hour production rate of 4,300 barrels of oil equivalent (BOE), which is a company record for FIG and a county record for Whiting. In the first 12 days of production, the well produced in excess of 27,000 bbls of oil and 23,000 mcf from the Middle Bakken formation. It is one of 4 new wells drilled from a single pad in the Skunk Creek Development. The other three wells on the pad have had initial 24 hour production rates ranging from 2,290 bbls - 3,106 bbls per day and 2,445 mcf - 2,900 mcf per day. The Fund bought the Skunk Creek properties in January 2015 as part of the company's ongoing strategy to purchase existing production, and proven acreage for future development, in high EUR (estimated ultimate recovery) areas while acquisition costs remain very low due to oil prices.

Fig Tree Capital Ventures' Chief Executive Officer Ryan Wright says, "We believe this property fits our strategic acquisition model and obviously the result speak for themselves. Buying low and selling high is an obvious goal with any investment. With oil prices at 6 year lows, it makes sense that companies like us with investable capital are buying now in order to position themselves for the future oil price increases. There are a large number of interest owners around the country that are simply being forced to liquidate premier assets to satisfy capital needs, which is why this oil price environment bodes well for our Funds."

FIG is actively seeking non-operating interest owners looking to divest of proven and producing property in the Bakken Shale, the Permian Basin, and the Eagleford. The company president Richard Main explains this on YouTube on <https://www.youtube.com/channel/UCMZ4sUUmA8iyDyLiB3pQqAg>.

"The next 6-18 months are shaping up to be a very advantageous time for us regarding acquisitions. As the low oil prices continue to force sell-offs, well-financed companies are in position to pick up the pieces at pennies on the dollar. Using today's price environment as the matrix for acquisitions gives us the ability to

realize solid returns on purchases of existing production and ongoing development in these areas right now. In addition, we gain tremendous upside potential on the development of proven reserves for the future when prices rebound."
