AZ Solar Now: Does Solar Increase Property Value In Arizona?

February 13, 2020

February 13, 2020 -
Mesa, Arizona based AZ Solar Now is pleased to announce that, according to Zillow, a leading online real estate marketplace, properties with solar energy systems installed on them sell 4.1% higher than regular electric powered homes. On top of being environmentally friendly and energy efficient, the Arizona solar company also asserts that properties with solar panels attract more potential buyers and can be valued and sold at a significantly higher price.

According to Zillow, the major reason why properties with solar energy systems sell for more than those without them is the fact that they provide substantial energy cost savings in the long run. Even though installing solar panels can be costly, future energy savings are worth spending a bit more money upfront. Zillow also states that homes with solar-energy systems are more likely to have other features that are hard to measure yet are valuable in nature, such as heated floors, which could contribute to a significant increase in their market value once put up for sale. Furthermore, according to the Zillow Group Consumer Housing Trends Report, 80% of home buyers agree that energy efficient features like solar panels make a property more valuable and marketable.

Meanwhile, as noted on AZ Solar Now?s website, they are one of the few solar companies in Arizona and the surrounding areas who specializes in supply, delivery and installation of solar panels and solar energy systems. They have nearly a decade of experience in the renewable energy industry, specializing in both commercial and residential installation of solar energy systems.

?The use of solar power and off-grid solar systems is becoming more and more popular due to the continual advances in solar energy technology. Installing solar panels today is also more affordable than ever; that?s why many homeowners and businessmen are enjoying a significant decrease in their energy bills while reducing their carbon footprint,? says Sonny Rock from A.Z. Solar Now. Rock explains that they provide property owners with a comprehensive energy consultation and solar panel installation services. The

company ensures that their technicians are up to date with the latest in the renewable energy industry to ensure that they have access to all of the latest solar technology.

?As we are a solar energy system wholesaler, we can offer some of the most competitive prices on off-grid solar power systems. We can also provide you with a flexible financing and payment plans that will suit your budget,? Rock adds. Furthermore, he points out that they help property owners secure all the necessary permits during pre-installation and then monitor their solar energy system?s efficiency after installation.

A.Z. Solar Now is a leader in solar energy systems in Mesa and the surrounding areas. As the top Arizona wholesale solar company, they provide their clients with a full range of services that include energy consulting, solar sales and education as well as solar construction, installation and post-installation monitoring.

Lisa Cahill, in a glowing Google review, says, ?My experience with Sonny was a 10, beginning with actually answering the phone himself and acting like there was nothing more important in his day than talking to me, listening to me, asking me questions and vice versa. That is what stands out in my mind, and it only got better after that. I am totally solar now, and it was so easy with him. I literally did not worry about a thing during the whole process. He delivered what he said with total communication and explanation every step of the way. He is a very nice person to do business with, and I would refer him to anyone.?

Meanwhile, in another 5-star Google review, John Szimhard says, ?Sonny at Arizona Wholesale Solar is awesome. He is a no pressure salesman that gives you the best information you need for your solar needs. He asks all the right questions to determine what you need. I would highly recommend Arizona Wholesale Solar and Sonny to anyone thinking about going solar. I would give him 10 stars if I could.?

Complete details can be found on the company?s website. Alternatively, interested parties may connect with A.Z. Solar Now through their official social media pages to stay up to date with their latest news and important announcements.
