

New Manual Stainless Steel Lemon Squeezer And Juicer Launched

August 20, 2015

August 20, 2015 - PRESSADVANTAGE -

iHomeInnovations, a home and kitchen company in Goodyear, AZ, has announced that it has introduced a manual lemon squeezer and juicer on Amazon. The company believes that when it comes to a lemon squeezer stainless steel is really the only metal that is able to handle the high acidic content of lemon juice. Making their product from stainless steel, therefore, guarantees its quality. To celebrate the launch, the company is offering it at a 15% discount with the entry of coupon code SAVE15IH at checkout.

Lori Young from iHomeInnovations says: "Our lemon squeezer is high grade commercial quality. As such, it is perfect for restaurants and bars, but it will be equally useful in the kitchen and making homemade cocktails. The black silicone handles also make it look really snazzy so it won't look out of place in either setting. We are really proud of this product and introduce it to the world with a 15% discount for a limited time only."

The manual lemon juice press comes with a long handle with silicone grip. This allows for a comfortable and solid hold when in use. Furthermore, it reduces the risk of the users getting lemon juice on their hands. It has a fully ergonomic design, "so it can also be used by people who may have issues with hand strength.

"The tool has been designed to be very easy to use, and it squeezes lemons incredibly quickly," says Lori. This is another reason why it is already becoming popular in cocktail and other types of bars. There is often little time to prepare a drink, and this squeezer makes it possible for guests to be served quickly. There is really no more need to be purchasing those little green bottles of premade lemon juice.

"We wanted to create something that can be used in the domestic kitchen, with the quality of something used in a commercial application," adds Lori Young. "We believe we have achieved that with this product, as it's made of commercial food grade materials and is quick and easy to use."

The citrus squeezer and juicer is also very easy to clean. It takes no time to rinse it off. The company recommends handwashing, but states it is dishwasher safe. As it is made of stainless steel, the coating will not wear off either. This keeps the juicer completely hygienic as well.
