

Masri Clinic for Laser and Cosmetic Surgery Specializes in the Latest Technology and Procedures for Surgical and Nonsurgical Applications

February 24, 2020

February 24, 2020 - PRESSADVANTAGE -

Masri Clinic for Laser and Cosmetic Surgery, based in Birmingham, Michigan, has revealed that they specialize in the use of cutting edge technology and procedures for both surgical and nonsurgical applications. Surgical applications include face procedures and body procedures. Nonsurgical applications include laser cosmetic procedures, injectables and fillers, and other procedures.

One of the specialties of Masri Clinic Birmingham is rhinoplasty and revision rhinoplasty. They can perform both reconstructive nasal airway surgery and cosmetic rhinoplasty. Cosmetic nose surgery, which is commonly called a "nose job," is a challenging and complex plastic surgery procedure because it requires changing the size and shape of the nose to make it better suit the patient's face, while maintaining or enhancing their ability to breathe. The adjustments to the nose size and shape must be in conformance with other facial features, their personality, and their goals.

There are two possible approaches: open rhinoplasty and closed rhinoplasty. Open rhinoplasty is ?external? and is therefore easier to perform. This is because the surgeon has easier access and more visibility. The incision is done in between the nostrils, known as the columella. Symmetry and success rate are higher because the doctor can observe the position of the various parts of the nose. Closed rhinoplasty is ?endonasal,? which means it can be more difficult, especially for less experienced surgeons. The incision is done inside the nostrils, which implies that there would be no visible scar. Augmenting the patient?s nose may involve the use of autologous cartilage grafts obtained from the nasal septum.

Another popular surgical procedure offered by Masri Clinic for Laser and Cosmetic Surgery is the facelift or rhytidectomy. This is designed to correct signs of aging by getting rid of excess skin, tightening the facial tissues underneath, and re-draping the skin on the face and neck to eliminate folds.

One of their latest methods for facelift is the FDA-approved and minimally invasive FaceTite rejuvenation treatment. This method does not require incisions because the skin is treated with RF energy that stimulates the body?s natural rejuvenation processes with long-lasting results. Those who are interested in these procedures can check out the location of Masri Clinic for Laser and Cosmetic Surgery through their Google Maps [page](https://www.google.com/maps/place//data=!4m2!3m1!1s0x883b3490a03e6be5:0xd485ce04e27cc16e?source=g.page.default) at <https://www.google.com/maps/place//data=!4m2!3m1!1s0x883b3490a03e6be5:0xd485ce04e27cc16e?source=g.page.default>.

One of their nonsurgical procedures that make use of lasers is truSculpt 3D® by Cutera®. This is the latest technology when it comes to skin tightening, fat reduction, and cellulite reduction. This is a nonsurgical and painless procedure that can reduce fat by up to 25 percent. How truSculpt 3D® works is by applying monopolar radio frequencies to slowly heat up fat cells to 45 degrees Centigrade. During a truSculpt 3D® treatment session, about 60 percent of fat cells are destroyed. And once these fat cells are destroyed, they are naturally eliminated from the body through the lymphatic system. The treatment sessions may need to be performed for up to one month.

FemTouch is another advanced nonsurgical procedure offered by the Masri Clinic. It makes use of carbon dioxide fractional lasers for rejuvenating the vaginal walls, stimulating collagen production, and enabling the body to restore vaginal tissue for better vaginal health and increased comfort. FemTouch may be used to treat various vaginal health issues, such as vaginal dryness or post-birth scarring; pain or discomfort during sex or exercise; and stress urinary incontinence and recurring UTIs.

Masri Clinic also makes use of the PiQo4 laser, which is the latest in cutting-edge technology for skin rejuvenation and resolution of unwanted pigmentation without the downtime. This particular laser can also be used for improved tattoo removal and the resolution of unwanted skin imperfections. This laser is capable of rejuvenating skin by using mechanical energy instead of heat energy.

Those who are interested in learning more about the procedures offered at the Masri Clinic for Laser and Cosmetic Surgery can visit their website at <https://masriclinicforlaserandcosmeticsurgery.business.site/>, or contact them on the phone or through email. They are open from 10:00 am to 6:00 pm.
