

Tucson Biological Wellness Launches YouTube Channel and Features Use of Hyperbaric Oxygen Therapy on Autistic Child

March 03, 2020

March 03, 2020 - PRESSADVANTAGE -

Tucson Biological Wellness, based in Tucson, Arizona, has announced that they have recently launched a YouTube channel and that one of the first videos on the channel features the hyperbaric oxygen therapy treatment of the autistic son of the founder of Tucson Biological Wellness, Dr. Jeanne Anne Krizman. After about 15 sessions, Dr. Krizman relates how her son's speech therapist had been very impressed with his progress.

Tucson Biological Wellness offers various preventative and restorative therapies and hyperbaric oxygen therapy is one of them. A 32-inch Soft chamber is used for this particular therapy. This chamber is expected to fit all sizes and has advanced features offering 1.3 ATA or 32 KPA. This huge 32 inch steel hyperbaric chamber is versatile and the combination of this chamber with specially chosen equipment can allow breathing at up to 95 percent oxygen levels and internal oxygen levels at the safe level of 40 percent oxygen. The chamber has a large window that is positioned in such a way that it minimizes the impact of claustrophobia and allows the patient to be relaxed.

Dr. Krizman explains, "Hyperbaric medicine, also known as hyperbaric oxygen therapy is the medical use of oxygen at a higher than atmospheric pressure. Hyper means increased and baric relates to pressure. This therapy refers to the intermittent treatment of the entire body with 100-percent oxygen at greater than normal atmospheric pressure. This increased pressure, combined with an increase in oxygen to 100 percent, dissolves oxygen in the blood plasma and in all body cells, tissues and fluids at up to 10 times normal concentration?high enough to sustain life with no blood at all.?"

In addition to hyperbaric oxygen therapy, also offers the infrared sauna therapy. Their Yoga Room Sauna allows clients to enjoy a sauna and a yoga session at the same time. There are a number of potential benefits

that clients can get from far infrared sauna. These include muscle pain relief, weight loss and increased metabolism, skin improvement, stress and fatigue reduction, relief for joint pain and stiffness, improvement of cellulite appearance, detoxification, and boosting of the immune system.

Dr. Krizman points out that their far infrared sauna is unique because the far infrared heaters are positioned on the back wall, front wall, side walls, and in the floor. The heaters are positioned in such a way that the heat is focused over the whole body. Without this proper positioning of the heaters, the client's core body temperature cannot be increased sufficiently to cause sweating and effective detoxification. The radiant heat will penetrate deeply into the muscles, joints, and tissues, causing oxygen flow and circulation to increase. This may help in getting rid of toxins from the cells, particularly the cells inside the fat where the body tends to store waste and harmful toxins like heavy metals and cholesterol.

Tucson Biological Wellness also offers red light therapy that is provided through the Platinum LED BIOMAX lights. These lights emit five different wavelengths: 630 nm, 660 nm, 810 nm, 830 nm, and 850 nm. Each of these wavelengths have their own potential health benefits. For instance, the 660 nm wavelength (red light) may help in decreasing training fatigue, reducing inflammation, enhancing bone healing, decreasing swelling after injury, and reducing neuropathic pain. The 830 nm wavelength (near infrared light) may help in speeding up healing and in reducing infection, improvement of bone repair and growth, increase the levels of "feel good" endorphins, and enhancement of aesthetic results after plastic surgery.

Tucson Biological Wellness also offers Hocatt, which is a combination of various modalities in order to possibly help with detoxification at the cellular level, improvement of circulation, increase in energy levels, and boosting of the immune system. The primary modality that is used is Transdermal Ozone. Some of the potential benefits of Hocatt include the inactivation bacteria, viruses, yeast, fungi, parasites, and protozoa; cleaning of the veins and arteries; reduction of inflammation; and activation of the immune system.

Those who are interested in hyperbaric oxygen therapy in Tucson and other therapies may want to visit the Tucson Biological Wellness website or contact them on the telephone or via email. They are open from Monday to Friday, from 9:00 am to 5:00 pm.
