

New Albany IN HVAC Repair Company Highly Recommends Getting Spring AC Tune-Ups Done

March 04, 2020

March 04, 2020 - PRESSADVANTAGE -

Allegiance Heating and Air Conditioning is a company that always urges its customers to be proactive when it comes to ensuring that their HVAC system is working properly when they need it. That's why they recommend that their customers get Spring AC tune-ups. It's the perfect way to ensure that when hotter weather arrives, their customers' AC systems will be there and working when they go to use them.

The company owner, Brian Schneider, had this to say about the importance of having a properly working AC system when the hotter summer weather hits, "Having insufficient air conditioning in the summertime can have a negative effect on your health and comfort. That's why having proper air conditioning is critical. Our goal this summer is to deliver the best value to our customers and maintain long-lasting relationships by always exceeding their expectations."

He says their spring AC tune-ups are very comprehensive in scope. During a spring tune-up, they will do such things as checking to make sure the inside air filters are clean and an HVAC system's blower unit is in good working order. Schneider says they will also clean any of the key AC system components that need it and thoroughly inspect them too. Allegiance Heating and Air Conditioning's experienced techs will also make sure the AC system is fully charged with refrigerant and has no leaks. The owner also noted that many times when they are doing spring AC tune-ups, they can catch and correct small air conditioning problems before they become bigger and much more expensive ones.

Those at this respected New Albany, IN HVAC repair company also emphasize that homeowners have a role to play in keeping their air conditioners operating at peak efficiency too. This entails keeping their important HVAC air intake areas free from blockage. This includes making sure the air intake inside of their homes is not blocked by furniture, boxes or other items. Schneider says that outside air conditioning units need to have air free-flowing to them in order to work at peak efficiency too. He stated that customers should never stack wood, building supplies or any other items within a few feet of their AC systems outside condenser and

compressor units. This area also needs to have grasses and tall weeds cleared from around it and customers should never let leaves and other lawn debris accumulate up against the outside AC unit.

If by chance a customer needs their older air conditioning system replaced in the spring in preparation for the warmer summer months, Schneider says his company can handle that for them too. According to the owner, Allegiance Heating and Air Conditioning provide service and repairs to both residential and commercial customers. Their skilled techs can repair heating and air conditioning units that are sold by them or their competitors. He says they also are specialists when it comes to installing and maintaining air scrubbers that will help improve the air quality in any home or business. Allegiance Heating and Air Conditioning even has a service club that its customers can join that offers such perks as two free cleanings per year (spring and fall), priority scheduling, and free diagnostic service calls.

The services that Allegiance Heating and Air Conditioning provide are also highly rated by their customers. Here is an example of that in a review from Justin Brown that says, "Allegiance is one of those companies with a well-earned stellar reputation. From sizing the right unit for our home through installation and follow up, I cannot imagine a better group of professionals to trust. They took their time in the installation, didn't cut corners, and answered all of my questions very thoroughly. I would strongly recommend Allegiance, whether for installation of a new unit or servicing of existing units."

For more information on this highly rated HVAC service company, the owner says they can easily be reached by phone or email and he also pointed out that their website <https://www.allegiancehvac.com/> is loaded with good information on their services as well.
