Twin Cities PC Repair Points Out the Advantages of Buying a Custom Built Computer

March 05, 2020

March 05, 2020 - PRESSADVANTAGE -

Twin Cities PC Repair wants people to know that they can get a custom-built computer that offers far superior performance over most big box store computers for only slightly more money. They also say that when someone has a custom-built computer made for them, it better matches their specific computer use needs.

Company owner, Patrick Jensen, had this to say about why custom-built computers should be strongly considered by those looking for a new computer, ?Just like you purchase a car to match your lifestyle, so too should you purchase your next computer that way. Working with computer experts like us will enable you to design your computer from the ground up to perfectly match your intended use for it. We will even give you expert advice along the way so your new custom-built computer will end up exceeding your expectations at a lower cost than you thought possible. Buying a computer that underperforms to do demanding computer tasks is like entering a NASCAR race with a 4-cylinder compact car. When you buy a custom-built computer, it will help you avoid this scenario and provide you with a computer that is capable of performing well long into the future.?

The advice the company gives on computer purchases and repairs is sound and that?s why they get such good reviews on business overwatch sites such as Yelp! When Jensen says that big box stores are very price-conscious but this comes at a cost, this statement is worth noting. He says big-box stores often cut corners performance-wise to keep their prices down. An example of this is using 4 MB of Ram when 8 MB is the minimum that any computer user should except. The performance differences between the two are night and day speed wise. The company owner says this is especially true when doing high demand computer tasks such as playing advanced video games or working with CAD programs. Having a lower number of megabytes may be ok for surfing the net, but its shortcomings will become very noticeable when doing computer tasks that demand higher speeds to help them run smoothly. He says a computer purchase is not something that a person usually does very often, that?s why it?s important to get it right. That way nobody ends up being stuck with a computer they are dissatisfied with. A custom-built computer is the best way to make a computer purchase that someone ends up being very pleased with. Jensen also aded that when someone purchases a custom-built computer from someone such as them, they also will get his undivided attention. This is much unlike salespeople at big-box stores who have many customers to wait on at once.

Those at the company have also recently taken on the task of informing their customers and others about the importance of installing Ad Blocker software on their computers too. Jensen points out that nuisance ad displaying on computers not only slows down a computers performance while they load and play but it also is very time consuming to click on them constantly to get rid of them. He points out that this can severely distract even the most focused individuals as they try to do work and recreational searches using their computer. The company owner says that not only are popup advertisements annoying and distracting but they can also be full of malicious code. Jensen informs that this poses a huge security and performance risk to any computer that has had a malicious type code installed on it. Jensen goes on to say that with the advances in ad-blocking software these days, no one should have to put up with the ad epidemic that is taking over the computer world.

Twin Cities PC Repair is a company that gets many favorable reviews on their Google Maps business listing. Out of 92 reviews that have been left on this webpage, the company averages an outstanding 4.9 out of 5-stars rating. Here is a Google maps review from satisfied customer Claudia Kulhanek that says, ?Patrick is one of a kind! It?s hard to find a computer support provider who is personable, patient, and reasonable. He is all that, and more. I trust his judgment completely. As a former computer support person myself, I can share from my personal experience, that he is golden. If you need computer support, hardware, etc., he?s your guy!?

For more on this companies custom-built computers or other services, Jensen says they welcome inquiries

by phone, email or web contact form.
