D.I. Auto Care Offers Window Tinting Services in Phoenix

April 01, 2020

April 01, 2020 - PRESSADVANTAGE -

D.I. Auto Care has announced that they are offering the kind of window tinting Phoenix car owners want to have for their vehicles. Having a window tint has a number of benefits for the car owner, such as reduction in cooling expenses by as much as 50 percent; reduction of heat inside the car or motor vehicle; increase in privacy; prevention of 99 percent of harmful ultraviolet rays from getting inside the car or motor vehicle; and prevention of glass shattering in case of a car crash.

Paul, a spokesperson for D.I. Auto Care, says, "We are happy to announce that we are offering window tinting services in Phoenix. It is important to note that this is not as simple as slapping on a bumper sticker. Those who are able to do it properly have had years of training and experience to learn how to shrink film and then make it fit perfectly to the car window. Take note that many of the new cars have curved glass car windows and this makes it very difficult to shrink the film and make it fit the shape of the glass. There are Pre Cut kits for your car windows that are available online. However, you still have to shrink the film and make sure that it perfectly fits the window glass. Thus, it is really advisable to get the services of a professional tinting company. And for those who are saying they need 'window tinting near me', try to check out our service."

A professionally done window tint has the ability to block UVA and UVB rays, which may be able to cause cancer, from getting inside the car. The tint will also prevent a large percentage of the sun's heat from getting in, which means lesser air conditioning costs. The window tint will also offer the advantage of making the car look more attractive, which may enhance its value. Plus, the car owner will also feel better while driving in traffic even when the Arizona sun is at its peak.

Another important service provided by D.I. Auto Care is ceramic paint protection coating. One of the latest advances in ceramic paint protection is the nano ceramic coating for cars, trucks, and boats. This provides the vehicle with a glass like coating that offers the benefit of a deeper shine and better protection against the heat of the sun that can cause the car paint to fade and appear dull over time.

There are many reasons why car owners may want to get ceramic coating for their vehicles. These include the fact that the car can stay cleaner longer; the fact that ceramic coatings last longer than other coatings and will not break down like wax or liquid sealants; the ability of a ceramic coating to make the car look like new for a longer period of time; protection of the car's surface so that it continues to look new for a long period of time; savings from not having to wash and wax the car often; the fact that the ceramic coating makes the surface scratch resistant; and ability of the paint coating to withstand external elements.

Another vital service provided by D.I. Auto Care is auto detailing, which can make the car look like new again. And this includes both interior and exterior detailing. With exterior detailing, they will clean the external surfaces and components of the car. And the car's outer surfaces may also need to be repainted using paint that has a glossy finish. They will also clean the chrome trim or replace it when required. They will also clean the tires, wheels, windows, and other external parts of the car. The outer surfaces will also have to be waxed and then polished.

People who are interested in Phoenix window tinting and other services can visit the D.I. Auto Care website or contact them through the telephone or via email. They are open from Monday to Sunday, from 5:00 am to 10:00 pm.
