# Naperville Roofer Storm Damage Team is Always Ready to Help Out Area Residents with Storm Recovery

*March 17, 2020*

CAPE CORAL, FL - March 17, 2020 -
Naperville Roofing & Construction is a well-respected company that provides a wide variety of home improvement services. Among them is their ability to fix any roof after it has been damaged by one of the strong storms that frequently pass through the Chicago area. They pride themselves on giving storm victims priority treatment so they quickly have a structurally sound and water-shedding roof above their homes once again.

James Kucharz, the company owner, had this to say about the unpredictable weather they often get in their service area, ?One thing that tends to keep us at Naperville Roofing & Construction quite busy is taking care of the roofing problems that are left behind from the large number of storms that pass by our area each year. That includes heavy winter snow, damaging hail in the spring and summer, and the strong winds which often blow off of Lake Michigan. No matter what type of roof damage someone in the Naperville area has sustained during a storm, we at Naperville Roofing & Construction are always ready to help them out. We offer free roof inspections and we can even help homeowners with their insurance claims.?

Kucharz added that perhaps no city is more aptly named than that of Chicago being known as the ?windy

city?. He says that many times of the year Naperville and other Chicago satellite communities experience unusually strong wind gusts. These gusts are no friends to the roofs in the Naperville area. The owner stated that wind gusts can cause everything from minor problems such as a few shingles being lost or impact a roof?s structure necessitating major roof repair or replacement. Kucharz says that not only does wind cause damage directly but it can also bring down trees and large branches onto roofs which can result in extensive damage.

The company owner says that heavy snow and ice also create big problems for roofs in the Naperville area. Shifting ice can move shingles and other roof coverings out of place and damage leak preventing flashing too. Heavy Snow itself can weaken or damage a roof?s structure if it?s allowed to build up over a long Chicago winter.

According to the company owner, hail can be another cause of storm damage that Naperville roofs receive. Kucharz says that one of the biggest problems with hail is that it does not always leave visible damage. He cautions that does not necessarily mean that it has not left any roof problems behind. He says that when golf ball or larger size hailstones pound down on a roof it can do such things as punch holes in it, knock flashing out of place, and damage roof underlayment. These types of damages often lead to a leaking roof which nobody ever wants to impact their home over a long period of time. That?s why Kucharz recommends that if any area homeowner?s roof has been pummeled by large size hail and they think some damage may have occurred as a result, they should call his company and ask them to stop by and do a free roofing inspection for them.

Naperville Roofing & Construction is also by no means one dimensional in the services that they offer. Kucharz says that in addition to their highly-rated roofing work they also specialize in window replacements, plowing, siding replacement, painting, awning installation, and porch construction. They can design and build home additions and they offer complete gutter and downspout replacement services too.

The company is also highly rated by those that have left reviews on their services. A good example of that is their Yelp reviews. Here is one of those from Mark G of Naperville that says, ?Roof replacement -- Very easy to do business with these guys. No pressure to sign with them. They know what they are doing! Quoted me two days to do the job and it took today's, right on schedule. I dealt with James, very professional and knowledgeable. I'll say it again. No pressure. I will be using them to do other jobs around the house. Highly recommend Naperville Roofing & Construction!?

Kucharz says that those who are interested in knowing about any of their services are invited to contact the company by phone, fax, email or by the form found on their website.
